Issues that seemed so important to us mere months ago have been pushed to the bottom of the list and the back of the room as National Guard soldiers and airmen answer the call in the aftermath of events of Sept. 11. Although some reputable scholars and security experts had sounded warnings about possible catastrophes of major proportion, few, if any of us, could conceive that terrorists would attack the Pentagon and take down the World Trade Center. In the early aftermath of these evil acts, there was much fear and anger. There is still fear and anger, but as a people and nation of great faith, we are determined not to live in fear and anger. Instead, we are resolved that our freedoms, our values, our people and our communities will be protected and that our form of democracy will prevail.

For many decades America’s national interests existed in other lands, other seas and other skies. Today, however, our national interests exist here at home as well. President Bush has called on the American people; he has called on a host of other nations and peoples; and he has called on the National Guard to ensure that our freedoms and way of life remain secure for generations to come.

Throughout Ohio, soldiers and airmen of the Ohio National Guard have answered the call. For the first time in nearly 50 years, soldiers of the 1-148th Infantry Battalion have been mobilized, for up to one year in response to Operation Noble Eagle. They are providing security at critical military/industrial/government installations across the Midwest. Army military police and Air security police from all our respective companies and squadrons also have been mobilized for Noble Eagle. Ohio Air Guard security forces squadrons have been called upon to provide protection of air assets both at home station and at deployed locations within the United States and overseas. Many of Ohio’s mobilized MPs are working with their active-duty counterparts at Fort Bragg, N.C. More of our MPs are providing security in Ohio’s six major airports as part of the president’s request; all are serving long hours. The call for security forces has been enormous, and we have turned to other units to help augment the requirement. Our Army scouts responded immediately.

Air crews and aircraft maintenance folks from the 121st Air Refueling Wing have been conducting 24-hour, seven-day-a-week operations. The 180th Fighter Wing was one of the first units to respond with F-16 aircraft in defense of America’s skies, launching within minutes of receiving the call from command authority as the horrible events of Sept. 11 began to unfold.

Enduring Freedom, the worldwide response to the terrorist attacks, has also touched other units. Members of the 251st Combat Communications Group are serving a one-year tour in an important planning element of European Command’s Air Operations Center, while a contingent from the 220th Engineer Installation Squadron has deployed to a classified location. Aviation, maintenance and support elements of the 121st Air Refueling Wing recently deployed for a one-year commitment in support of Central Command mission requirements in Turkey. The 121st Civil Engineering Squadron has deployed to a classified overseas location as well.

The national leadership is working diligently to sort out the issues we confront in this war on terrorism. We know it will be a protracted struggle. The Homeland Security concept will involve all of the nation’s agencies and resources. Homeland Defense, the Defense Department’s key piece of the pie, will address the response to actual attacks on our country, our institutions and our citizens.

The National Guard, by virtue of its unique dual role, will continue to be called upon to play a prominent role in the assignment of Homeland Defense missions. Some of those roles will be new to those of us in the Guard and, in some cases, even new to us as a nation.

Just a special word to our deployed forces and their families: The senior leadership is concerned for your personal well-being during your term of service. We will do our best to visit with you at your location, to ask you to share with us the issues that concern you and to help get answers to those concerns. Your commanders are pledged to do the same. If you need help, please ask! For family members: I believe we have an excellent Family Readiness team in place to assist as families sacrifice right along side your soldier or airman. Families may contact the Family Readiness Office by phone at (800) 589-9914 or via the Internet at www.ohionationalguard.com, by clicking the Family Readiness tab at the bottom of the home page.

Needless to say, the Ohio National Guard’s response has been immediate and most significant. For all of you that have answered the call, know that your nation and community are grateful. I fully understand the sacrifice that many of you are making to perform this service. My heart goes out to the families who are required to make sacrifices as well.

I would like to acknowledge the tremendous efforts of our commanders and staff personnel who worked long and hard to ensure those soldiers, airmen and families were provided immediate and important support during the mobilization period. Requirements that no one expected were thrust upon us as we closed out the fiscal year. I would say that what has pleased me most is the tremendous cooperation and teamwork that, to me, is the trademark of this great Ohio National Guard.
Citizens can send mail to deployed guardmembers

As a service project, the families in our religious education program at St. Barnabas Church in Northfield, Ohio, have written postcards to the men and women in the Ohio National Guard, offering our thoughts and prayers for those who are involved in Operation Noble Eagle. Our local paper, The News Leader, ran an article that stated the postcards would be accepted at the following address:

Operation Noble Eagle
37th Armor Brigade
4094 Sullivan Ave.
Columbus, Ohio 43228

Before we address the postcards, I wanted to make sure that we have the correct information and also that the postcards would be forwarded to those in service to the Ohio National Guard. We have not written to anyone specific and I am under the assumption that these postcards will be given to anyone who would most like to receive a message from home. Please let me know if any of my information is incorrect. I appreciate your assistance in this matter. Thank you and God Bless America.

SUSAN SIMENC
NORTHFIELD, OHIO

The address is correct, and postcards (no sealed packages) are still being accepted. Even though the holidays have passed, deployed guardmembers would still enjoy getting mail from patriotic, concerned citizens. Mail will be accepted throughout the duration of the guardmembers’ deployment, although no return date has been announced as of this printing. Original orders said Ohio Guardmembers could be deployed for up to one year, through this fall.

Homecoming photo perfect gift

I am the girl on the front inside cover of the Winter 2000/2001 Buckeye Guard (“The Gulf War, 10 years later,” p. 20-22). That picture is of my mother, Master Sgt. Ava Green of the 121st Air Refueling Wing, and I when she came back from Desert Storm.

When she saw the picture she was very honored that you chose that picture for your magazine.

She has since retired and is doing very well. My mother and I can not get that picture anywhere. So if you have the negative or the actual picture, my mother and I would like to have a copy. The reason my mother is not writing is because this is a surprise for Christmas. I would like to blow it up and frame it.

LEXI PLATTE
CINCINNATI

LEXI:

A copy of the photo was mailed to you well before Christmas so you could surprise your mother.

Yours is the type of photo we hope to be taking plenty of, soon, when Ohio Army and Air Guardmembers return home safely from Operations Noble Eagle/Enduring Freedom.

Veterans have saint when it comes to benefits

Shawnee State University is blessed to have a veterans coordinator who really cares about her job. University veterans know that they will receive all entitlements they have earned while serving their country in the armed forces.

Sitting in her office, day after day, Faye Logan deals with a government agency that is slow to pay, inundated with paperwork and regulated by strict enforcement of policies and procedures.

For 15 years, Faye Logan has dedicated her life to serving the people that volunteer to protect this great country before attending this institution. She is respected by the school administration and community leaders. Veterans who attend this institution and counselors of surrounding high schools know that Faye Logan will provide them with expert guidance and solid information in the arena of military education benefits.

As a recruiter in the Ohio National Guard, I am required to develop Centers of Influence (COIs) to assist in recruiting efforts. Faye Logan is my most important community representative. She provides recently discharged veterans with educational information about the Army National Guard that can double their current entitlements.

Finally, every November Shawnee State University celebrates Veterans Day with ceremonies and events in Portsmouth. Faye Logan is a central figure in the success of this event. She spends numerous hours making sure all veterans within the community are recognized and acknowledged for their selfless service to this country.

The more than 200 veterans that attend Shawnee State University are grateful that Faye Logan is their veterans coordinator. They know that they are receiving all benefits and entitlements guaranteed to them for their service to their county.

OHARNG RECRUITING COMMAND

BG seeks guardmembers who served in Korean War

In the future, the Buckeye Guard staff will be writing an article on the Ohio Army National Guard’s involvement in the Korean War to commemorate its 50th anniversary.

The staff is looking for former Ohio Army Guardmembers who served during the war, either overseas or stateside, and would be willing to be interviewed for the article.

If you are interested, please provide your contact information by e-mail to buckeye@oharng.org, call (614) 336-7003 or write a letter to us at the address at the top of page one.

BUCKEYE GUARD STAFF
War will continue until Americans can conduct ‘their lives without fear’

Pointing out that the al-Qaeda terrorist network crosses more than 50 countries, Defense Secretary Donald Rumsfeld said the task is to go after it, and the Taliban, “until Americans can go about their lives without fear. “

“We didn’t start the war, the terrorists started it when they attacked the United States, murdering more than 5,000 innocent Americans,” Rumsfeld said. “The Taliban, an illegitimate, unelected group of terrorists started it when they invited the al-Qaeda into Afghanistan and turned their country into a base from which those terrorists could strike out and kill our citizens.”

As the campaign against terrorism marches on, coalition forces continue strikes against Taliban and al-Qaeda targets throughout Afghanistan, the secretary said.

“Our goal is not to reduce or simply contain terrorist acts, but is to deal with it comprehensively,” he said. “We don’t intend to stop until we’ve rooted out terrorist networks and put them out of business. Not just in the case of the Taliban and al-Qaeda in Afghanistan, but other networks as well.”

But Rumsfeld reiterated that eradicating worldwide terrorism wouldn’t happen overnight. “It’s a marathon, not a sprint,” he said. “It will be years, not weeks or months.”

Victory will not come without a cost, he said. “(War is) ugly. It causes misery, suffering and death, and we see that every day,” Rumsfeld said. “Brave people give their lives for this cause. Needless to say, innocent bystanders can be caught in the crossfire.”

As a nation that lost thousands of innocent civilians in a period of just one month, Rumsfeld said, “We must continue to go after it, and the Taliban and al-Qaeda in Afghanistan, is its network crosses more than 50 countries.”

The Department of Defense will look at ways to kick-start U.S. production of anthrax vaccine that, up to now, has been manufactured by just one company in Michigan, Defense Secretary Donald H. Rumsfeld said.

Rumsfeld remarked that DoD is going to try to save its anthrax vaccine program with the manufacturer, Bioport. He noted that other efforts to produce anthrax vaccine for the U.S. military had “failed over a period of years.”

Bipor was DoD’s sole contractor for anthrax vaccine. The company has had quality control problems and hasn’t produced any vaccine for some time. Its manufacturing operations currently lack Food and Drug Administration approval.

Officials said DoD has anthrax vaccine on hand to meet anticipated military needs.

Reservist’s legal victory supports deployment rights

In a precedent-setting case for reservists, a U.S. district court judge in Louisiana signed a judgment favoring an Army Reserve soldier who suffered financial ruin while deployed to Bosnia.

The court found that the rights of Lt. Col. Stewart Cathey were violated under the Soldiers’ and Sailors’ Civil Relief Act when his bank refused to lower his interest rate to 6 percent when he deployed in 1996.

“Case has far-reaching implications,” said Lt. Col. Paul E. Conrad, legal counsel, Office of the Chief, Army Reserve. “The court has made clear that creditors cannot ignore requests by reservists to reduce their interest rates on loans and obligations, when properly presented upon activation, or they could face lawsuits for a refund of wrongly charged interest.”

The judgment allows Cathey to pursue his case against the bank in a civil trial. Cathey filed suit after the bank foreclosed on a home to observe stores the reservist owned when he deployed.

The Soldiers’ and Sailors’ Civil Relief Act allows servicemembers to suspend or postpone some civil obligations so that they can devote their full attention to military duties.

The Act protects servicemembers by providing reduced interest rates on mortgage payments, credit card debt and other individual loans or obligations; protection from eviction if rent is less than $1,200; and a delay in all civil court actions such as bankruptcy, foreclosure and divorce proceedings, to name a few.

Army aviation joins flight in service’s transformation

The Army aviation field is in flight toward transformation, but as long as technology keeps improving, senior leadership says an end-state is nowhere in sight.

Aviation has been leading the Army’s transformation to an objective force, said Lt. Col. Michael Courts, the Comanche systems synchronization officer for Deputy Chief of Staff for Programs-Forces Division Aviation.

It began with the retirement of Vietnam-era aircraft (see article on retirement of the Cobra helicopter, pages 10-11), planned recapitalization and modernization of interim airframes, and continued development of the RAH-66 Comanche, Courts said. In addition to equipment, he added, aviation is developing doctrine, organizations and training programs that support the objective force.

The Army’s aircraft fleet by 2004 will consist of UH-60 Black Hawks, AH-64 Apaches, CH-47 Chinooks and OH-58D Kiowa Warrior aircraft, followed by procurement of RAH-66 Comanches beginning in 2006.
Faces in the Guard

**Pvt. 1st Class Steven Dyer**  
*Light Vehicle Mechanic*  
Headquarters and Headquarters Troop, 2-107th Cavalry, Kettering

Not just a skilled craftsman with the wrench and other mechanic’s implements, Dyer strives to be a well-rounded soldier and person. During training year 2001, Dyer was the unit’s outstanding performer on the annual Army Physical Fitness Test. He is currently studying dance at Ohio State University, where he also works on the school-run dairy farm. Dyer has an associate’s degree from Sinclair Community College in Dayton.

**Master Sgt. Robin Myers**  
*Finance Computer Assistant*  
121st Air Refueling Wing, Columbus

The desire to have a successful career inspired Myers to join the Air Guard 16 years ago. Myers initially signed up to take advantage of the tuition assistance program and earn a sociology degree from Ohio State, but said she has stayed in for many reasons, including opportunities to travel the world and meet new people. She enjoys spending time with her husband, Mike, also an Air Guard member, and their daughters, Lauren, 13, and Erin, 10.

**Sgt. Jay Gillon**  
*Bridge Crewchief*  
1193rd Engineer Company (Panel Bridge), Cincinnati

A 12-year veteran of the Ohio National Guard, Gillon has served nearly the last seven with the 1193rd. The military has grown on the Cincinnati native, and he has re-enlisted twice. In addition to being trained as a bridge crewchief, Gillon—the unit’s NCO of the year for 2001—has completed the Army’s tank hull mechanic and TOW gunner schools. Gillon plans to finish his bachelor’s degree at the University of Cincinnati.

**Senior Airman Ryan Hupp**  
*Weather Forecaster*  
164th Weather Flight, Columbus

The military has been and continues to be a tradition in Hupp’s family. Born at Lackland Air Force Base, Texas, Hupp returned there two decades later for basic training after joining the Ohio Air Guard about two years ago. Currently a student at Columbus State, he enjoys weight lifting in his spare time. In keeping with the family tradition, Hupp’s teen-aged sister, Adrion, plans to join the Air Guard when she is old enough.

**Spc. Mary Cornell**  
*Intelligence Analyst*  
237th Personnel Services Battalion, Columbus

Unmatched educational benefits, the opportunity to learn an interesting skill and the prestige of serving in the Army were reasons why Cornell said she joined the Ohio Army Guard two years ago. While at annual training last summer at Fort Dix, N.J., Cornell was distinguished honor graduate of her Nuclear, Biological, Chemical (NBC) Defense class. In her spare time, she enjoys kayaking, backpacking and adventure racing.
Satisfying the need for SPEED

Story by Sgt. J.R. Lewis
HQ STARC (-)

Simply put, Chip Henderson loves to go fast. He loves driving his Porsche 944 Turbo around racetracks with other speed freaks. He loves cruising on winding country roads in his Mercedes.

"I can only drive the Porsche on the open road for a day or two. I don't have a radar detector," Henderson said.

And he loves flying helicopters for the Ohio Army National Guard.

When he's not flying helicopters or performing administrative/executive/office duties for the 2-107th Calvary Squadron, headquartered in Kettering, Maj. Henderson is thinking about, pre-tracking with other speed freaks. He loves performing administrative/executive officer duties for the 2-107th Calvary Squadron. Henderson is thinking about racing in a downhill slalom ski event... what could be better than taking your car out into a parking lot and running it as fast as you can get it to go?

Just as there are two types of races in which he competes, Henderson believes there are two types of racers. "There are guys who like to show off their cars and the group that I belong to that like to get in them and go fast," Henderson said. "I'm not so concerned about my paint job. I'm more worried about how fast I can take a corner."

Henderson has familiarized himself with the capabilities and maintenance of his Porsche with the same attention to detail he uses in flying helicopters.

He believes there is a strong connective line between the PMCS (Preventive Maintenance Checks and Services) of his chopper and the hours he spends tuning the engine, checking the fluids and fixing the brakes of his German sports car.

"When you brake from 130 mph down to 50 to take a corner with cars in front of you, behind you and on both sides, you don't want anything to go wrong."

In the air, Henderson said going fast means going smoothly. The easier the ride, the more successful he considers the flight (a sentiment undoubtedly shared by his passengers). "Flying should be smooth and gentle," he said.

On the racetrack, speed equals violence and being gentle means being the last car across the finish line.

"You're either on the brake or on the gas," Henderson said. "It can be a very violent thing. "But whether you're flying low above the trees or on a race track, you're still looking for accuracy and precision."

It's fairly easy to tell exactly how badly addicted someone is to going fast. It's all in the voice. Ask Henderson about driving in the races he runs his Porsche in yearly, and the excitement in his voice is akin to a child after his first ride on a motorcycle... or a roller coaster.

"It's like a roller coaster ride without the rails," is one of his most-used expressions. Then ask him about the long months of late autumn and winter, when there are no races to enter, no way to just "forget about everything and drive for awhile." His response, which will most certainly entail spending long hours in the garage getting the Porsche ready for the spring, has the familiar tone of a child being told "no."

Henderson's love of racing fast cars seems to prove Einstein's theory that says if something can go fast enough it will travel back in time.

For Henderson, the mental trip back in time includes growing up with a father who shared a passion for performance automobiles.

Ironically, his father's job as an Ohio State Highway Patrol Trooper entailed busting speeders, while his passion for NASCAR drew him to fast cars in his off time.

Henderson and his dad found a common bond in the garage and worked to restore a 1960 MGA.

Despite the country's current loving relationship with the Brits, Henderson draws the line in the realm of automobiles. "After I got married, my father kind of gave me the MGA," Henderson recalled. "I tinkered with it from time to time. It's British, so it's temperamental."

Tinkering with cars and serving in the Army have come to occupy Henderson's life in ways that he can't fully express into words, but the proof is visible in the way he flies—both in the air and on the ground.

"As a kid, I wanted to be a race car driver," Henderson said. "I dearly love the Army, but I have a passion for auto racing."
Although the Ohio National Guard’s partnership with the Hungarian military has spanned nearly a decade, it is evident from recent training exercises that the relationship is not waning. Quite the contrary, the Ohio-Hungary union—originally mandated when the National Guard Bureau established the State Partnership Program partnership in 1993—is moving past the mutual familiarization stage, and on to opportunities for advanced joint training between the two militaries.

In one of the larger exchanges in the history of the partnership—an operation dubbed Buckeye One—more than 100 Ohio Air Guard members deployed for two weeks in August to air bases in Taszar and Kecskemet, Hungary. The deployment was accompanied by a separate weeklong visit by high-ranking Ohio Guard leadership, civic leaders and federal legislative staffers.

Buckeye One was designed to allow F-16 “Fighting Falcon” jet aircraft pilots from the 178th Fighter Wing, Springfield, to conduct air combat tactics against Hungarian air force pilots and their MiG-29 jet fighters. In addition, members of the Hungarian Defense Forces were able to observe KC-135 “Stratotanker” air-to-air refueling operations.

“Ten years ago, there’s no way we would be here. And now that we can be here and offer the hand of friendship, and share information—it’s really given me pause,” said Col. E.J. Thomas, director of operations for Headquarters, Ohio Air National Guard, and Buckeye One deployment commander. “When we used to learn about the planes we’re flying against, it was in a classified briefing.”

In another facet of the exercises, nearly a dozen U.S. pilots flew as passengers in the Russian-built MiG-29s while an equal number of Hungarian pilots flew in the U.S. F-16s. Supplementing air combat training operations, a C-130 “Hercules” cargo aircraft crew from the 179th Airlift Wing, Mansfield, flew several missions while in Hungary, including one to Germany and another to Italy to pick up spare parts for the F-16s. In addition, they flew three missions to Kecskemet, nearly 120 miles west of Taszar.

“I trust what we leave behind will
be of assistance in ensuring the Hungarians will be best able to execute their own military and defense agendas,” Thomas said. “The mission is an excellent opportunity for members of both countries to learn more about each other’s armed forces, to share valuable training, logistics and flying operations information, and to develop personal relationships that will be of great help should a defense contingency arise that requires our respective teams to work together.”

More than 20 U.S. states have volunteered for the role and responsibility of creating and maintaining long-term relationships with the fledgling democracies of central and eastern Europe, and the recently independent nations of the former Soviet Union.

Participants in the civic leader trip were provided with an in-depth look at the State Partnership Program and its impact on countries recently entering the NATO family. One goal of the trip was to increase the knowledge of key government officials as well as leaders in the community and other societal institutions. Trip participant Roderick G.W. Chu, chancellor of the Ohio Board of Regents—which oversees higher education in the state—said he went away from the trip with a greater appreciation and better understanding of the roles of Ohio’s citizen-soldiers and airmen.

“I was impressed by how much the guardsmen really enjoyed what they were doing,”

Call me ‘Uncle Toli’

Story by Tech. Sgt. M. Randy Dunham
179th Airlift Wing

Senior Master Sgt. Toli Obrynba carried the duffle-bag-sized package onto the C-130 with the care and caution normally reserved for the most delicate cargo.

He opted not to palletize the precious parcel, keeping it between his feet for the two-day trip. It had to make the 5,000-mile trip in one piece, without any damage.

The 179th Airlift Wing member wasn’t carrying fragile aircraft parts or sensitive computer software for his part in the Hungarian deployment coined “Buckeye One.” Obrynba was carrying a ball bat neatly wrapped in newspaper, a few balls, a handmade blanket, some T-shirts, other toys and some money.

It was delicate cargo for a family he’d never met, but had always known—through God.

The strangers who were his “family” in Békészszentandris, Hungary, had lived in the United States for several years while the father, Auguston Dobos, attended the Ashland Theological Seminary. While here, the Dobos became good friends with several local church parishioners and kept that friendship even after they returned to Hungary. The local church decided to sponsor them as a “foster” family.

Departure from the states was difficult, especially for Auguston’s children who knew the United States as home. “But, he is a revival minister,” said Obrynba. “And he felt his calling was to return to Hungary and help resurrect Christianity.”

After Hungary fell under communist rule following World War II, Christianity there virtually ceased to exist. Anyone daring to practice religion would do it only at clandestine gatherings for fear of reprisal from the government. But following the collapse of the Soviet Union in 1991, Hungary developed close ties with Western Europe.

“Auguston knew his place was in Hungary,” Obrynba said. “He packed up his children and returned to his homeland.”

Obrynba learned about the Dobos family through mutual friends in his church.

“My calling was to return by chance in a city where neither had lived close ties with Western Europe. But following the collapse of the Soviet Union in 1991, Hungary developed close ties with Western Europe.

“Auguston knew his place was in Hungary,” Obrynba said. “He packed up his children and returned to his homeland.”

Obrynba learned about the Dobos family through mutual friends in his church.

“I was on a mission to find this man (during the deployment),” he said. “I had never seen him, held him or talked to him. But, I knew I’d find him.” After a few days, Obrynba actually made contact with Dobos. “I found a number and got ahold of him,” he said. “We told each other where we were and realized we were about five hours apart, by car. It seemed we might not be able to meet. But, then he mentioned he was going to Budapest to take his pregnant wife to a specialist, and we agreed to meet there.”

However, in a series of events Obrynba attributes to God listening to his prayers, the pair would meet by chance in a city where neither had planned to be.

Several members of the 179th were invited to attend an air show at an the 59th Air Base in Kecskemét, a central Hungarian city about 120 miles from Taszar. After several hours at the base, everyone was bused into the city to eat at the local McDonald’s. While standing in line at the restaurant, Obrynba overheard a conversation between one of his fellow airmen and a native.

“Michelle Walker was in line and someone asked her in very good English, where she was from,” Obrynba said. “She said Ohio. He said he knew where that was. I was only kind of listening because I was in my own little world, kind of daydreaming. But, then I heard him say he attended the Ashland Theological Seminary.

I was on a mission to find this man (during the deployment),” he said. “I had never seen him, held him or talked to him. But, I knew I'd find him.” After a few days, Obrynba actually made contact with Dobos. “I found a number and got ahold of him,” he said. “We told each other where we were and realized we were about five hours apart, by car. It seemed we might not be able to meet. But, then he mentioned he was going to Budapest to take his pregnant wife to a specialist, and we agreed to meet there.”

However, in a series of events Obrynba attributes to God listening to his prayers, the pair would meet by chance in a city where neither had planned to be.

Several members of the 179th were invited to attend an air show at an the 59th Air Base in Kecskemét, a central Hungarian city about 120 miles from Taszar. After several hours at the base, everyone was bused into the city to eat at the local McDonald's. While standing in line at the restaurant, Obrynba overheard a conversation between one of his fellow airmen and a native.

“Michelle Walker was in line and someone asked her in very good English, where she was from,” Obrynba said. “She said Ohio. He said he knew where that was. I was only kind of listening because I was in my own little world, kind of daydreaming. But, then I heard him say he attended the Ashland Theological Seminary.
He said that, in fact, he was supposed to meet someone from Ohio in Budapest. Just as he was saying my name, I turned around. He saw my name tag and exclaimed 'It’s you. I’m supposed to meet you in Budapest.' So, there we were, having never met, not even supposed to be in that city, meeting for the first time."

Obrynba said the meeting wasn’t, in his book, by chance. "I think it was the good Lord tapping me on the head reminding me he can hear my prayers and that he does listen," he said.

Obrynba didn’t have the care package with him, so the two finalized plans for the meeting in Budapest. For the next couple days, Obrynba was excited and anxious. When he finally did meet the Dobos family, his expectations were met and exceeded. "I plan to ‘adopt’ them myself," he said. "A minister in Hungary doesn’t make a lot of money. I want to do what I can to help them out." He said the children—two girls and one boy—spoke excellent English and Hungarian. Their friendship was immediately sealed. And the children filled a special part of Obrynba’s heart that had been empty since his daughter, Amy, died in an automobile accident in 1991.

"They called me Uncle Toli," he said. "The one thing I always valued in my life was hearing my daughter call me ‘Dad.’ I don’t hear that anymore. Hearing those kids call me Uncle Toli really touched my heart. It made everything worthwhile." •

Chu said. "They took great pride in doing their jobs and doing them well—a highly professional and enthusiastic cadre of individuals.

"It’s now clear to me how integral the Guard’s role is in the entire defense makeup of the U.S. armed forces, something I really didn’t appreciate prior to the trip." Col. Richard Green, 179th Airlift Wing commander, stressed the importance of gaining support from elected officials, as well as other institutional and community leaders. One such way to increase support is through educational trips like the one to Hungary so "they can really see what (the Guard’s) mission is," he said. "We (guardmembers) want to make sure our local, state and federal (leaders) are informed. We feel if they are informed, they will be there to support us when we need it."

Trip participants also met with Hungarian governmental and military leadership in Budapest, the country’s capital. One future goal of the Hungarian military is the development of a community-based, reserve component military entity—much like the National Guard.

According to Bela Kiraly, advisor to the office of the prime minister, Hungary is developmentally behind in regard to reserve training. "We are working to establish a National Guard," said Kiraly, a military veteran who took part in the 1956 Hungarian revolt against Soviet rule. "The United States has been our great helper in accomplishing this, with (financial, technical and moral) support. "The big problem is the armament of our military. We (currently) have the Soviet style. The rearmament of our armed forces is still a few years away."

Maj. Gen. John H. Smith, Ohio adjutant general, said the purpose of the Buckeye One deployment and accompanying civic leader trip was to reaffirm the Ohio Guard’s commitment to the Hungarian Defense Forces. Smith said a focused “long-term engagement plan” over the next few years will help identify areas and needs for future Ohio-Hungary exchanges, and maximize the opportunities for relevant training.

"I feel very strongly about this relationship," Smith said. "There is much we can offer Hungary, and there also is much we can learn from the Hungarians.

"I think with the development of a plan, we (Ohio and Hungary) are more likely to see the benefits and progress that we both desire."

While Hungary already has achieved an initial benefit of being partnered with Ohio—that of receiving guidance, preparing for and ultimately gaining membership into NATO in 1999—there are still many opportunities for expanded exchanges and development of further programs that haven’t been explored, according to leadership on both sides.

One such area may be modeling the civilian and military education systems of the Hungarian Defense Forces after that of the U.S. military, Chu suggested.

"The briefing I had with representatives of the Hungarian Defense Education Department suggests that we have a lot we can share with the Hungarians," Chu said. "They are building their version of our service academies to provide undergraduate and technical education to a small number of their future active-duty forces. "As the Hungarians consider instituting a National Guard model of their own, they may benefit from learning from the wonderful success of our Ohio National Guard Scholarship Program and its contributions to developing a fully staffed, highly educated and committed complement of guardmembers." •

Aircraft modernization puts

Story by Spec. Michelle Morgan
HQ STARC (-)

The AH-1 "Cobra" flew its final Ohio Army National Guard mission, soaring out of Ohio Sept. 19. The old war horse was racing to greener pastures, to its retirement home in New York, and many members of the 2-107th Cavalry Squadron said they were sad to see it go.

From Vietnam to Desert Storm and beyond, the Cobra distinguished itself and, as far as many of the pilots who flew it were concerned, there was none better.

"The Cobra was the first true attack helicopter," said Chief Warrant Officer 2 Gary Adkins, F Troop officer-in-charge, maintenance officer and Cobra test pilot.

"It had high-speed accuracy capable of attacking multiple targets."

As part of Army aviation modernization, the Cobra attack helicopter was officially retired from service Army-wide this past September. Coupled with the planned retirement of the UH-1 "Huey" utility helicopter by October 2004, the Army will reduce its fleet from 4,500 to 3,500 aircraft, including a reduction of 600 in the reserve components.

From its inception in the 1960s, the helicopter was awesome, according to many of the Ohio Guard pilots who've flown it. The sleek, slender airframe—only 36 inches wide—made it hard to detect in combat situations. It was capable of hovering and hiding between the trees, to wait for the enemy. Once spotted, the Cobra could dive after the enemy while firing, then roll out to locate its next target.

"It was a major combat multiplier...of all the assets you could use against the enemy, it was the quickest, easiest way to get fire power into any area," said Chief Warrant Officer 4 Samuel McKinney, 2-107th Cavalry Squadron standardization instructor pilot who also saw action in Vietnam. "We could take off from land or a ship, and those helicopters would perform for us beyond what they should. As a pilot, you couldn't help but love the Cobra because once you became acclimated to all of its characteristics, it became part of you."

Designed much like a fighter plane in that the pilots sit tandem—one in front of the other instead of side-by-side—the Cobra was an impressive sight sitting quiet in a hangar, let alone bearing down on a target.

"You knew you were in a war machine from the minute you entered the helicopter," said Maj. Chip Henderson, 2-107th administrative/executive officer.

The Cobra had two primary functions according to Henderson—observation scout and tank killer.

Over the years, the AH-1 was modified as technology changed. The telescopic sight on the front was capable of identifying and engaging targets more than 4,000 meters away. Equipped with 20-millimeter guns, direct fire weapons, rocket pods, area fire weapons and TOW (Tube-launched, Optically-sighted Wire-guided) missiles, "the Cobra had awesome stand-off capability—you could shoot them (the enemy) farther away than they could shoot you. Often, a tank wouldn't even know it was engaged by a
Cobra to rest

Cobra until it exploded,” Henderson quipped.

However, the Cobra, while venerable, was an aging war horse. Many of the airframes dated back to Vietnam. As the military increased the number of modern aircraft which cost less to maintain, the manufacturers stopped making replacement parts for the Cobra, which led to the eventual grounding of the aircraft.

In any low- to mid-threat environment, the Cobra was the helicopter of choice for the pilots from the 2-107th. In mid- to high-threat situations, though, even a veteran like McKinney with a distinct affection for the airframe saw the need for modernization.

“With the state of warfare today, the Army needs helicopters with better weapons systems and electronic capabilities,” he said. “The Army wants fewer helicopters that are capable of much more than the retiring Cobra.”

Unfortunately, the 2-107th members are unsure when permanent replacement aircraft will be sent or what they will be.

OH-58 observation helicopters were sent to the Army Aviation Support Facility No. 1 at North Canton as temporary replacements for the retiring Cobra. The OH-58s will allow pilots to fly the required hours to sustain their qualification and the mechanics to perform their maintenance mission.

Special Mission

Traffic on West 12th Street in Erie, Pa., slowed to a crawl for a few minutes one day last year as drivers watched a Cobra attack helicopter make a low pass over the highway, circle Lord Corp. twice and then come down amidst a swirl of dust in the company’s parking lot.

The Cobra was in town for a special mission—to let company workers see their handiwork.

Lord Corp. makes 13 parts for the Cobra, the world’s first dedicated attack helicopter, and machinist Walter Lego could spot many of them.

“That thing up there that looks like a bicycle frame, that’s one of them,” he said pointing to an area by the helicopter rotor.

Lego was among a crowd of 50 employees who walked to the craft as soon as the rotors stopped moving and the pilot, Ohio Army National Guard Chief Warrant Officer 2 Benjamin Emch, opened the cockpit and waved an “all clear.”

The helicopter and crew stayed a few hours, allowing workers to visit at the craft as their shifts and schedules allowed.

Most people wouldn’t recognize the parts local workers make—pitch link rod ends, trunnion bearings, tension-torsion straps, mast springs, landing gear straps, pylons and panel mounts. But Chief Warrant Officer 4 Donald Baker, the other pilot of the Cobra, knew exactly what they were.

“Some of those parts are small, but a lot of them are important—real important,” he said. “Some of them hold the whole rotor up there.”

“We are really happy they could bring it (the helicopter) in. We don’t often get a chance to see a lot of the products we make,” said Mark Rose, manager of the West 12th Street plant.

“We take great pride in the quality of our products,” Rose said. “This visit will allow Lord employees to see the application...of the parts we make.”

“This is what Lord is all about,” said Harry Ross, an employee and president of the Local 1968, one of two machinists’ union locals that represent Lord Corp. workers in Erie.

“This is nice. This is pretty neat,” said Bill Galleur, president of the other machinist labor group, Local 1211. “I’ll bet we have something, some part, on just about every helicopter they have.”

Most parts that Lord Corp. employees create help to stabilize the craft, and control noise and vibration.

Employees heard that this particular Cobra was made in 1988, and saw action in the Gulf War. Emch, a Lord Corp. employee and member of Troop D, 2-107th Cavalry Squadron, North Canton, held court alongside the craft, “talking shop” with employees—explaining the parts, capability and armament on the ship, and talking about his experiences flying it.

JIM CARROLL / ERIE TIMES-NEWS
with all the uncertainty facing the future of military operations at home and abroad, military leadership and analysts alike agree on one thing—large, sweeping military engagements such as those seen on D-Day in Normandy and the landing at Inchon are for the history books.

The concept of Military Operations in Urban Terrain (MOUT) will guide all branches of the U.S. Armed Forces into the new millennium. This includes the National Guard, which is meeting the future head-on.

With this in mind, members of the 324th Military Police Company, Middletown, descended on the Close Quarters Battle (CQB) training area at the Warren County Correctional Facility near Lebanon. The purpose was to school soldiers in the latest civil disturbance and Special Reaction Team (SRT) training.

The CQB area, surrounded by a fortress of unharvested corn stalks behind the correctional facility, provided the MPs with a two-pronged training benefit, according to Capt. Rudolph Pringle, commanding officer of the 324th.

“These types of hands-on exercises take unit cohesion to another level,” Pringle said. “At the same time, we’re providing the unit and National Guard with an excellent retention tool.”

The unit maximized training time by running the civil disturbance and SRT training simultaneously.

The civil disturbance training consisted of teams of riot gear-clad soldiers defending positions and attempting to control an unruly mob, played by other soldiers in the unit. There were three different scenarios: protecting a building; protecting a fence line; and working to control a rioting mob with no clear objective.

The rioters threw water balloons, hurled insults and taunts at the MPs, and rushed the arching wall of riot-controllers in an attempt to break ranks and incite confusion in the defending soldiers. At the same time, the line of MPs advanced forward in unison, striking with their batons on each movement, and slowly plowed into the crowd to the chanted commands from a team leader behind the line.

“The biggest thing for the opposing force (OPFOR) is to be belligerent and show resistance while trying to break through the lines,” said Cadet Brandon Skiver, a platoon leader with the 324th.

While the training called for a certain amount of physical contact...
Middletown MPs conduct civil disturbance, special reaction team training at Warren County Correctional Facility

between the MPs and the soldiers acting as rioters, safety was a key concern.

"The biggest challenge of a civil disturbance exercise is striking a balance between safety and realism," said 2nd Lt. Amy Hill, a platoon leader with the 324th. "The water balloons aren't as realistic as the rocks these soldiers could face, but at least the soldiers have a taste of what to expect in a real-world civil disturbance. This is training for real-world policing missions, getting away from training soldiers for huge, land-based ground wars."

Controlling and manipulating large groups of unruly citizens requires the use of not only protective gear and batons, but also gas dispensers, which were filled with water for the exercise.

The MPs also practiced "cuffing and stuffing" rioters who broke through the lines, and filling in gaps left by soldiers who left the line to subdue rioters.

After repeatedly running through each scenario, the MPs conducted an after-action report (AAR) to determine the strengths and weaknesses of the tactics employed.

A short distance away from the simulated mayhem, soldiers broken down into SRTs armed themselves with paintball guns, preparing to cross a small field through a hail of sniper fire to take on an enemy nestled inside of a CQB facility. The facility simulates a building held by an OPFOR, with the roof removed for observation and videotaped review.

The SRT/CQB exercise blended the tactics of civilian SWAT teams and MOUT-driven practices employed by the military, according to Sgt. Rory O'Donnell, a team leader with the 324th.

"The mission is to save lives, not to kill everything alive inside of the building," O'Donnell said.

The four-man SRT teams entered the building and engaged the OPFOR room-by-room, until the entire building was secured.

Teamwork was essential to the SRT/CQB training, with soldiers maintaining discipline with hand and arm signals for each movement.

"Good communication is crucial in there, not only to secure the building, but to prevent fratricide," O'Donnell said.

Muzzle-awareness was a key aspect in the training, along with establishing clear lines of engagement, called phase lines. The SRTs were constantly reminded to keep their weapons pointed along their visual path, employ tactical angles to reduce body exposure to enemy fire, and always have at least two members of a team in each room.

"Two men are needed, three is perfect," O'Donnell told the soldiers in a pre-exercise briefing. "The first two enter the room with the third covering from behind."

While certain tactics, policies and mission requirements necessitated the MPs to function "by the book," the building's layout and the shifting scenarios in real-world situations ensure that the soldiers employ great amounts of flexibility. "These are the most fluid tactics available," O'Donnell said. "That's why we do the training. If it doesn't work, we change it. Tactics may be different, but the end result should be the same."

Videotaping each scenario and conducting AARs allowed each soldier to view his or her strengths and weaknesses from a bird's-eye view and provided opportunities for each MP to improve SRT techniques. "We give each soldier a chance to practice in the (CQB) facility several times until they get it right," O'Donnell said.

"You sweat in training so you don't bleed in war."

While civil disturbance is more integral to the unit's primary mission, the SRT practice in the CQB building adds another facet to the soldiers' capabilities and readiness. "There is always a chance that our guys will have to search and clear a building," Pringle said. •
There is a bonding force in the following blast that erupts from a tank’s main barrel. It can be felt in the silence between the initial jolt and recoil of the massive steel beast, and the delayed explosion is nearly biblical in its awesome power. Whether the shell hits its target or not doesn’t take away from the power of the vehicle or the sense of fraternity felt by those who have launched fire from its belly.

Of course, hitting the target is crucial, and in the strikingly different, fast-paced world of tankers, the best defense is a good offense. So when the tankers from the 1-147th Armor Battalion traveled Aug. 16-30 to Camp Ripley, Minn., the goal was to steer, aim and shoot the weapon of choice, the M-1 Abrams tank, with the kind of precision that has defined the tank forces of the U.S. military since World War I.

One of the premier tank-training sites in the National Guard, Camp Ripley is located in Little Falls, Minn. Of the 53,000 acres of the camp, nearly 51,000 are available for maneuvers.

The four-man tank crews fired on a progressive tank course split into “gunnery tables,” with night- and day-firing required on each table, according to Maj. Mark R. Slavik, 1-147th Armor Battalion commanding officer.

Tank Tables IV-VII (4-7) were preliminary rounds, while Table VIII (8) was the defining challenge for the armor crews, Slavik said.

Each tank crew consists of four soldiers—a tank commander, gunner, loader and driver. According to Slavik, each crew member has to work together with precision, correct phrasing of orders, skill and accuracy in order to qualify on Table VIII.

Table VIII consists of 10 timed engagements (six day and four night engagements). Each crew starts with 1,000 points, with deductions assessed for missed targets, time violations and “crew cuts,” or improper firing commands.

Crew cuts were identified by evaluators who listened in and communicated with the crews via radios, Slavik said.

The M-1 Abrams is a virtual rolling fortress equipped with a 105-millimeter cannon, a 7.62-mm secondary gun and a .50-caliber machine gun mounted atop the tank.

In order to qualify on Table VIII, each crew needed to pass all seven preliminary tables and score at least 700 points on Table VIII.

Of the 28 crews that fired on the Table VIII qualification range at Camp Ripley, 17 were from the 1-147th and 11 from the 2-107th Cavalry Squadron. According to Slavik, 16 of those crews qualified on the first run, while 12 crews needed a second pass to qualify.

Two crews fired “distinguished” on Table VIII, an honor reserved for crews scoring more than 900 points. One of the crews scored 913 points, while 935 points were tallied by the Alpha Company crew of Staff Sgt. Michael Baxter, tank commander; Spc. Casey Fathbruckner, gunner; Spc. Carl Pitney, loader; and Pvt. 1st Class Joseph Dailer, driver.

Baxter said the unit’s success at the range is an indicator of the progression made in terms of training, task-oriented skills and dedication.

“When the new Table VIII came out two years ago, even active-duty Army units were having trouble qualifying. Our
"This is the Super Bowl of tanking. It’s what every tanker wants to do." 

Sgt. Barry Graham / 1-147th Armor Battalion

first time on Table VIII, we only qualified one crew in the whole battalion,” Baxter said. “This year, we went from one crew in the whole battalion to seven crews out of one company.

“I think that is an indicator of how far we’ve come in a short time—as a company and a battalion.”

Fathbruckner said the crew was extremely relaxed during the intense Table VIII qualification—another indication of how hard the crews trained before heading into the Minnesota wilderness to test their abilities.

“We weren’t plagued by the nervousness you feel when you’re not quite sure if you’re doing something right. We stayed on track, kept the loading running smoothly, and listened to the orders given by the tank commander,” Fathbruckner said. “As targets came up, they were called out and knocked down. I just shot well by putting the crosshairs on the target and squeezing the trigger.

“It’s just like taking a picture."

Sgt. Rick Lee, the gunner on the crew that scored 913 points, said the amount of time spent by each crew training and preparing for the annual training built a kinship that resulted in triumph on the tank range.

“As a unit, we really benefit from crew integrity,” Lee said. “It means a lot of training, a lot of hard work, but we’re all dedicated to doing our best.”

Sgt. Barry Graham, an ammo loader whose crew qualified on Table VIII, said the bond between crewmembers extends beyond the time spent in the tanks.

“We work so well in our small groups because we spend a lot of time talking to each other, eating together and working toward a common goal,” Graham said. “This instills the esprit de corps that translates into success in the tank.”

But successfully steering and firing a tank alone aren’t enough for success on Table VIII, Graham said. “This is the Super Bowl of tanking. It’s what
Missions of Mercy
Toledo’s medical squadron provides health care to Peruvian citizens

Story and photo by Maj. Bill Antoszewski 180th Fighter Wing

It’s not every day you ride a boat to work, but then it’s not every day you provide world-class health care within a stone’s throw of the Amazon River in a Peruvian jungle. For two weeks, this was all part of a typical day’s work for members of the 180th Medical Squadron, Toledo.

During the period of Aug. 4-18, 29 members of the 180th Medical Squadron (MDS) deployed on a humanitarian-civil action medical mission to the city of Iquitos, Peru.

Unit members worked out of school classrooms, lean-tos and tents at five different sites throughout the region. Thousands of Peruvian citizens who do not have access to or cannot afford quality medical care were provided free screenings, examinations, medications, dental care and eyeglasses. The care given was desperately needed and greatly appreciated. At many of the sites, locals camped overnight to wait for treatment.

The medical squadron was supported by interpreters and medics from several other units including the 180th Logistics Squadron; 180th Services Squadron; 200th RED HORSE Squadron, Port Clinton; 178th Medical Squadron, Springfield; 105th Medical Squadron, New York Air National Guard; 123rd Medical Squadron, Kentucky ANG; and Keesler Air Force Base (active duty).

The medical squadron was also assisted by numerous physicians, nurses, technicians, an optometrist, a pharmacist and several interpreters provided by the Peruvian military, Ministry of Health and Ministry of Education.

According to Col. Will Richter, 180th MDS commander, the key to the success of this humanitarian mission was total integration of ANG personnel and their Peruvian counterparts into one health care team.

“ar the drop of the hat, it was a new and challenging experience for the medical squadron to work with the U.S. Embassy in Lima, Peru; U.S. Southern Command in Miami; and 12th Air Force at Davis-Monthan AFB, Ariz.

There were dozens of requirements, large and small, that had to be addressed to ensure the safe and productive deployment of 40 ANG personnel, their equipment, and sufficient medical supplies to serve more than 10,000 patients.

All of this was accomplished while operating at a remote site, hundreds of miles from the nearest U.S. support facility.
On Sept. 11, America came under attack from those who reject our freedom-loving way of life. Our enemy has no respect for the dignity of human life and other values that we hold dear. But through Operations Noble Eagle and Enduring Freedom, we will defeat that enemy, we will prevail over terrorism, and Ohio soldiers and airmen will return home to their families and to a grateful community. Their mission is an important one: for America, for freedom and for our way of life. I am proud of the guard members who represent Ohio in the fight against terrorism. Our thoughts and prayers will be with these brave Ohioans and their families until their safe return.

Ohio Air Guard pilots among first to fight terrorism

Until Sept. 11, Ohio Air National Guard Maj. Anthony Montecalvo never flew a combat air patrol.

He spent the Gulf War on the sidelines with an active-duty Air Force fighter squadron in Florida. "We had our bags packed," but the squadron’s F-16s weren’t deployed, he recalled. Years later, he joined an Air Force Reserve F-16 squadron just as it returned from flying combat air patrols over Iraq for Operation Southern Watch.

But on Sept. 11, with 2,000 hours in F-16s over the span of 15 years, but "zero combat time," Montecalvo found himself flying a combat air patrol over the United States, hours after terrorists flew hijacked airliners into the World Trade Center and the Pentagon. His was one of four fighter jets southwestern Ohio residents heard about 2 p.m. that Tuesday as they roared into the sky from Wright-Patterson Air Force Base, armed for combat on a new front line: America.

Montecalvo was one of several pilots with Ohio’s 178th Fighter Wing who switched from teachers to warriors for a number of days after the terrorist attacks, flying fully-armed F-16 fighter jets from Wright-Pat as a part of the U.S. homeland defense. Though he’s a full-time instructor at the unit’s F-16 fighter training schoolhouse, Montecalvo wanted real targets after the September attacks.

"After seeing all that destruction on TV...against our people, using our airplanes, it just made me and all of us furious," Montecalvo said. "We wanted to take the fight to the enemy."

But Montecalvo and his wingmates found themselves flying patrols over their own country, and they faced the nightmarish prospect of being ordered to intercept or even shoot down a U.S. airliner full of civilians. U.S. fighter jets on the East Coast were ordered to intercept some of the hijacked airliners on Sept. 11 as it became clear terrorists were using them as missiles in suicide attacks, but none of the fighters reached the airliners before they crashed, according to news reports.

In addition to the 178th, aircraft from the Ohio Air Guard’s 180th Fighter Wing, Toledo, were among the first outside the East Coast to answer the call to defend the nation’s air space in the aftermath of the terrorist attacks. Had the hijacked plane that ultimately crashed in Somerset County, Pa., continued westward on that day, or had terrorists taken over another aircraft in Midwestern air space, the responsibility to engage that plane may have fallen on the 180th.

The Federal Aviation Administration (FAA) had grounded most civilian flights by the time the 178th pilots flew, but Montecalvo said he was ready to do whatever he was told.

"We take an oath to defend the
United States against all enemies, foreign and domestic.... We know it would have to come from a very high authority to shoot down an airliner full of American citizens,” he said. “We were ready to do whatever we were tasked to do.”

It was a sobering, real-world lesson for the students of the 178th’s military schoolhouse. First Lt. Mike Driscoll of Daytona Beach, Fla., one of the student pilots who graduated in November, said the Sept. 11 attacks and U.S.-led airstrike in Afghanistan made him reflect on how he might have to use his new skills.

“You realize what you’re training for. You realize it could happen at any moment now. It brings back the realization of why you’re here and what you signed up for,” he said.

For Montecalvo, the reminder came on the morning of Sept. 11 when he heard the news of the attacks on his car radio as he was pulling out of his driveway in Cedarville. He pulled back in, went into his house and was “glued to the TV for the next two hours.”

He had flown a night training flight on Monday night, so he wasn’t due back at the 178th early, he said. But he soon got a call to report in, even as the base was going to its highest security level and sending most workers home. “Everyone on base was leaving and a few of us were trying to get in,” he said. “We got the jets ready (although we didn’t know what kind of tasking order we were going to get),” he said.

“We didn’t know what was next. They were landing airplanes all over the country,” he said.

The North American Aerospace Defense Command (NORAD) ordered the combat air patrol that came down to the 178th. Montecalvo was not allowed to discuss specifics of the mission, but he said he took off in a flight of four F-16s about 2 p.m. Strapped into his cockpit and orbiting over an area he couldn’t disclose, Montecalvo was cut off from the news flooding the airwaves. His radios were tuned to air traffic control frequencies, and they were eerily quiet. Except for an occasional medical helicopter with special clearance, his patrol was alone in the sky.

“It was very strange. The radios were quiet except for the controllers talking to us. We didn’t talk to each other that much,” he said. “We were up there...for about four hours. Just as we were leaving, there was another flight of F-16s coming in. The civilian controller on the ground said, ‘On a personal note, all of us down here really appreciate what you guys are doing, and we’re all going to sleep better tonight knowing you’re up there protecting us.’

The instructors talked to their students about the new war after Sept. 11, said Lt. Col. Tom Duke, the wing’s chief of student training. The notion of shooting down a civilian airliner is “something that’s never even been thought about before.” Since about half of all Air National Guard pilots also fly for commercial airlines, “we could actually be tasked to shoot down one of our own pilots,” he said.

But the flights since shortly after Sept. 11 have been for training or instructor proficiency, not combat patrols, according to Duke. And the wing’s full-time training job means its fighter squadron, the 162nd, won’t be deployed for combat. “We’re much more worthwhile cranking out new (F-16) pilots,” Duke said.

The new war and the new mission of homeland defense haven’t blunted the pilots’ eagerness. If anything, the sense of urgency had increased it.

Montecalvo said students graduating from the F-16 school are soberly aware of the dangers facing them as full-fledged fighter pilots. “We love flying and it is a lot of fun,” he said, “but it’s (also) a deadly serious business, and they realize that,” Timothy R. Gaffeney / Dayton Daily News
Sept. 25, 2001

Guard called to assist

Timothy Haskamp wasn’t dissuaded against re-enlisting in the Ohio Army National Guard after the Sept. 11 attacks on America.

Even though he felt the Guard would be activated in some capacity, Spc. Haskamp, a member of the 324th Military Police Company, Middletown, once again signed on for more service.

"Yesterday was my original ETS date," said Haskamp, a married federal security guard with two children, referring to the date he was originally scheduled to end his military service contract.

Just days before, President Bush asked the nation’s governors to use the National Guard to augment commercial airport security; this included about 150 soldiers from the 324th and the 838th MP Company, Youngstown.

"This is the reason I joined—not for college or the money," Haskamp said.

No matter what prompted soldiers to take the oath, they were called on by Ohio Gov. Bob Taft to provide an armed presence in support of private security at airports in Columbus, Dayton, Cleveland, Toledo, Akron-Canton and Youngstown beginning Oct. 5.

As the soldiers prepared for their mission, the Youngstown and Middletown armories were beehives of activity. In addition to drawing weapons and attending mission briefs, the newly activated soldiers went through a full gamut of paperwork—including medical records screenings, legal and military record reviews, as well as edu-

251st Combat Com Group supports USAF’s Air Operations Center

About 20 members of the 251st Combat Communications Group, Springfield, were called to active duty in late September, and later deployed to Germany, where they are expected to remain for at least 12 months.

The mission of the 251st CCG is to provide the design and implementation of plans for all types of communications systems the Air Force may need to accomplish its missions, including secure and unsecure computer networks, satellite communications and phone service.

The deployed airmen are working directly in support of Operation Enduring Freedom and Operation Northern Watch, and also managing assets for Operation Joint Guardian and Joint Forge (both Balkan operations), according to Chief Master Sgt. Chris Muncy, 251st Combat Communications Group. One member is working in Brussels, Belgium, in the NATO Headquarters as a frequency manager.

While some unit members are working in the U.S. Air Force-Europe (USAFE) Network Operations Security Center, the majority work underground in the command center of the USAF Theater Air-Operations Support Center, Muncy said. MAJ ANN COGHLIN / 178TH FIGHTER WING

123rd ACS The 123rd Air Control Squadron, Blue Ash, provided airspace surveillance to supplement regular FAA/NORAD radar coverage immediately following the events of Sept. 11, and has continued to support these duties as operations tempo requires, on a volunteer basis.

SPC Nick Marconi, 324th MP Company, directs travelers at the Port Columbus International Airport to prepare belongings for examination.
Airport security

Sept. 28, 2001

Airport security services and family support briefings.

"It’s overwhelming trying to get everything taken care of with work and home," Haskamp said. "But the unit has helped out, and given us and our families a lot of support and information."

Once the paperwork was complete, soldiers received 16 hours of classroom instruction from Federal Aviation Administration officials in addition to on-site training at their assigned airports.

Task Force Commander Lt. Col. Rick Hall told the soldiers just before the start of their FAA training that this assignment would be a change from the norm.

"This is the most high-profile job you’ll have in the National Guard," Hall said. "The president wants you in these airports because of what you offer to the American public."

"We feel it is a great honor to be chosen for the task of restoring confidence to the public," said Capt. Dan Barrett, 838th MP Company commander, whose soldiers reinforce security at airports in northeast Ohio. He said he feels confident in the ability of the soldiers to perform the tasks assigned.

According to Capt. Dave Lambert, interim commander of the 324th, the mission suits the MP’s training in identifying possible threats. "It’s not law enforcement, but the mission has law enforcement aspects," he said.

Since the Sept. 11 attacks, the FAA has asked the Defense Department to coordinate the use of about 5,000 National Guard members at 422 airports across the nation. This will give the federal government time to create a new federal law enforcement entity responsible for aviation security.

Airport security staff and officials have been very grateful for the National Guard support in their airports. "The additional presence of the Guard, the show of more security makes the public more confident in the airways," said Steve Bowser, deputy aviation director at the Youngstown-Warren Regional Airport.

Many travelers agreed with Bowser’s assessment. "I think it’s fantastic," said Heather Miller, a frequent corporate flyer who lives in Boardman. "Under the circumstances, we need the added protection the National Guard is providing."

Although the initial outlook forecasted the soldiers to be on duty anywhere from six months to a year, no firm time-frame had been set, military officials said.

"We’re more than ready to handle this," said CPL. Jeremy Shearer, the 324th’s company clerk. "We’ve got the right personnel and our guys have the right attitude and are enthusiastic about fulfilling the mission." SGT J.R. LEWIS AND SPC MICHELLE MORGAN / HQ STARC (-)

Military police provide stateside protection

Approximately 350 soldiers—about 150 members each from the 135th Military Police Company, Brook Park, and 323rd Military Police Company, Toledo—were called to augment existing security at U.S. Army installations.

"The mission is one of taking over law and order at Fort Bragg for now," said 135th 1st Sgt. Wade Johnson.

According to Capt. James McCandless, commander of the 135th, the unit may receive a subsequent mission tasking after its initial 12-month activation is completed. "Things remain undetermined whether we will stay at Bragg or follow on to go somewhere else," he said.

"We are about to embark on a mission which will ensure the security and hope of a nation in peril," said 323rd Commander Capt. Jeffrey Watkins during the unit’s send-off ceremony Oct. 11. "We are up to that challenge."

Soldiers admitted leaving home is difficult, but they also found comfort in fulfilling a mission considered essential for national security. Sgt. Jacquelin Cover, a 323rd MP who has a 1 1/2-year-old son said, "I’m glad to do my part so that my son will grow up in a free society and I will have had something to do with that."

The 135th and 323rd were supplemented with members of the 838th Military Police Company, Youngstown, and the 324th Military Police Company, Middletown.

196TH MOBILE PUBLIC AFFAIRS DETACHMENT

Security forces protect home station, AF bases

Master Sgt. David Marcum was mowing the lawn when he received the call saying he’d been activated. But the civilian police officer wasn’t surprised. "I knew this was a possibility," said the 178th Fighter Wing member. "I’m prepared. I deployed to Desert Storm, so I knew what to expect."

Marcum is just one of about 300 Ohio Air National Guard security forces activated throughout September and October to support homeland defense operations; also included were airmen from Columbus’ 121st Air Refueling Wing, Mansfield’s 179th Airlift Wing and Toledo’s 180th Fighter Wing.

While all four Ohio wings were activated to increase security at their home stations, some teams were deployed to enhance security at Air Force bases in locations such as Maryland, Alabama and the Carolinas. One contingent of 121st security forces conducted transport missions of Taliban and al-Qaida prisoners.

Members of Marcum’s squadron understand the sacrifices associated with military service.

Senior Airman Kassandra Enright, a sophomore at the University of Cincinnati, is putting her education on hold due to the activation. "The Guard is my first priority and my first concern. I will finish college and it will be paid for 100 percent thanks to the Guard. I am honored to have this opportunity to give back."

Tech. Sgt. Marc Smith knows that leaving loved ones can be difficult. "I was away from my family a lot on active duty," he said. "It is always challenging, by they understand my role in the military." SSgt SHANNON PARKS / 178TH FIGHTER WING
Soldiers and families stood in front of the Delaware armory, dazed at the spectacle across the street. Hundreds of children had just filed out of their classrooms and lined the sidewalks in front of the usually stoic, brick school building. The fifth- and sixth-graders from Willis Middle School waved American flags, held up signs that said, “We’re proud of you!” and chanted “USA! USA!”

“It’s amazing,” said Lucy Jeffery who, wrapped in her husband’s arms, seemed as much a part of his uniform as the nameplate sewn above his pocket.

Exactly what Jeffery and more than 100 members of his unit were doing wasn’t quite clear that day, Oct. 9, though they all knew they were headed to Fort Knox, Ky., where they would be given their next duty station — one of five Midwest sites selected by the U.S. Department of Homeland Security and approved by Army Forces Command.

During the emotional unit send-off ceremony, Adjutant General Maj. Gen. John H. Smith emphasized that since the horrific attacks on the nation, much of the military’s efforts will remain in the United States. “For many decades now, America has looked outward with respect to its national interests — as it’s worked other lands and other skies — but today’s reality is we need to protect our own homeland.” But pride wasn’t the only emotion present that day. Fear, anxiety and anguish also could be seen in family members’ eyes as they prepared to say goodbye.

Nancy Truex, whose son Mark received an honorable discharge from active duty in April 2001, begged her son not to rejoin the military after the tragic events of Sept. 11. Truex, an interstate truck driver, was 60 miles from New York City when the twin towers were hit. When he returned to Ohio, he scheduled a meeting with a recruiter.

“When the haircut came home,” Nancy said, “I knew what that meant.” Truex signed the enlistment papers on Sept. 14 and spent the next day drilling with Charlie Company.

A phone alert Oct. 1 told unit members to report Oct. 3 to the Delaware armory. Truex, who was in Tacoma, Wash., at the time, got word from an e-mail from his mom. “It said to call home immediately, so I knew something was going on,” he recalled.

Though Truex enlisted knowing federal activation was probable, he didn’t expect it so soon. So, like any one leaving the comforts of home for a year, the MP-turned-infantryman made some life adjustments.

“I just got engaged today,” he announced proudly the morning of the send-off ceremony. Truex said he and his girlfriend, Rachel, had talked about getting married, but they weren’t able to manage it on such short notice. “I wanted to show my promise to her, so I went ahead and got her a ring.”

Like Truex, other soldiers were affected by the harsh reality of having to leave loved ones behind.

“This kind of moved things up for us,” said Spc. Chris Christman, who married his fiance of three months, Kris, on Oct. 5. Christman’s new family not only included a wife, but also a 6-year-old stepson, Sean.

Another son, Jax Scally, had to say “bye-bye” to his dad just one day after his second birthday.
"We’ve tried to explain it to him," said Staff Sgt. Jim Scally, who ironically spent nearly four years in the 82nd Airborne without ever being deployed. "I think he knows I’m in the Army and knows I’m going away for a while. But I really don’t think he can understand the scope of it all.

"It’s hard. It’s really hard to be away for up to a year," Scally said. "That’s half his life right now."

Capt. O’Brien also left two young children behind at home—2-year-old Connor and 10-year-old Maura. He admitted to getting goose bumps when President Bush told U.S. servicemembers to "Be ready" during his Sept. 20 address to the nation.

"Since then, I think anyone wearing the uniform realized federal activation was a real possibility, though that acceptance doesn’t always translate to the servicemember’s family," O’Brien said. "There’s a fine line between who’s happy and who’s sad, but everybody supports us, and that’s what is important." SFC DIANE L. FARROW / HQ STARC (©)

Fort Knox training preps infantrymen for missions in Midwest

As the events of Sept. 11 unfolded, there was no doubt that some sort of military response would result. How quick of a response? No one knew. Who were we looking for? Would there be more attacks? Question upon question haunted the nation.

What was never in question was the readiness of the American soldier to respond. In early October, with the power of President Bush’s call for up to 50,000 reserve servicemembers, the 1-148th Infantry Battalion (Mechanized) gathered for the defense of the United States.

"As a National Guardsman you are prepared to serve a dual role. One is to serve your governor and the people of Ohio during times of need. The other role is to defend our nation from foreign and domestic," said Master Sgt. Lawrence Malloy, of Headquarters and Headquaters Company, 1-148th, Lima. "In this case we have been called to defend our land, just like our forefathers, on our own soil."

For the first time since 1952, the 1-148th Infantry Battalion mobilized for federal service. Unlike the mobilization nearly 50 years ago, this mission called for defense efforts on American ground. Active-duty soldiers from Fort Knox’s 4th Brigade, 85th Division provided 1-148th soldiers with the additional training required for this nontraditional warfare.

"These troops are not being sent to the battlefield," Maj. Jacqueline Hillian-Craig, 4-85th public affairs officer said. "We are playing by a new set of rules," she said, noting that new training tactics are required to defend against an unknown and unseen enemy.

Homeland Security and Support Operations training (SASO) and Homeland Security Individual Readiness Tasks (H-SIRT) were mandatory events for validating the units’ effectiveness and readiness for future homeland operations. H-SIRT training included searching vehicles and personnel, responding to demonstrations, NBC (Nuclear, Biological, Chemical) reaction scenarios and overall understanding of the rules of force. SASO training took place at Knox’s Mounted Urban Combat Training site, a mock city where troops learn to conduct military operations in an urban environment. The units were evaluated on their response times, techniques and overall handling of very real situations.

"It’s really tough training. We train to kill an enemy. Now we are training for the different situations we may face here in the states," said 1st Lt. Pedro Casiano, of C Company, 1-148th, Delaware.

Capt. Stuart Hatfield, operations officer for the 4-85th, said despite the difficulties of transitioning from a reserve status, the soldiers have held up well. "They have gone from National Guard status to active-duty status and left their families, and made the sacrifice for their country," Hatfield said. "Many of them have taken a pay cut and they have done it without hesitation."

Sgt. Jesse Stock of C Company, 1-148th, was two days into his first job in sales and marketing at a Central Ohio golf course when he got called to active duty. "The hardest part of being here is being away from my family," Stock said. "But I believe it’s my obligation to be here because of what happened on Sept. 11. However long it takes, I’ll serve my country." CPT ANDY ANDERSON / HHC, 1-148TH INFANTRY BATTALION & SPC STACIE MITSCHKE / FORT KNOX

Conducting checkpoint operations at Fort Knox helped 1-148th soldiers prepare for homeland defense missions.

After nearly 12 hours of searching cars for bombs, guns, knives and other contraband that could kill himself and others around him, Pvt. Josiah Miller is exhausted. The bags under the 19-year-old's eyes and his slow walk from the green, five-ton truck to his third floor room in the barracks at Fort Knox, Ky., are proof.

Miller, of Urbana, is part of a force of Ohio Army National Guard members that's helping guard this active-duty base. His unit, Echo Company, 1-148th Infantry Battalion, Urbana, is one of hundreds of National Guard units across the country tasked with augmenting existing security at military bases, chemical plants, arsenals and other installations since the terrorist attacks Sept. 11 on Washington D.C. and New York City.

Echo Company soldiers search each car that enters the base and check identification cards of drivers and passengers.

"I see it as very necessary for security reasons and to restore confidence in people," said Miller, who wakes up at 3 a.m. each day and sits through an hour of briefings by military police before taking his 5 a.m. post at Fort Knox's Wilson Gate.

As Miller walks up the stairs of his barracks following his shift on a Wednesday afternoon, he's wearing the standard Battle Dress Uniform (BDU), Kevlar helmet and black leather boots. In the right top pocket of his BDU blouse is a 3-by-5-inch card titled, "Rules for the Use of Force (RUF)." All guard members involved in the homeland security mission at Fort Knox are required to have the RUF card when on duty.

While on duty, Miller also carries an M-16 rifle. On his back is a 50-pound rucksack full of personal gear, including a protective mask, in case of chemical attack.

Months earlier, in May 2001, Miller, a sophomore at Cedarville University, joined the National Guard to help pay for his education and fulfill a childhood dream. About two weeks later, he left for basic training at Fort Benning, Ga., home to the U.S. Army Infantry School.

PV2 Josiah Miller, Co. E, 1-148th Infantry

Miller returned home from basic and Advanced Individual Training (AIT) at 11 p.m. on Sept. 19, a few hours before he was to begin his second year of college. But he dropped out of school two weeks later when his unit was activated.

Miller was finishing a homework assignment on a Monday evening in early October when his platoon sergeant called to inform him of the deployment.

"My first thought was, 'Wow,'" he said. "I just wasn't expecting it.

"It was disappointing because I didn't get to know the guys well enough," Miller said of three of his four roommates. The fourth, John Glett, is his best friend. Two days later, Miller moved out of his dorm room and went home. As he opened the front door, he noticed a sign that his parents posted there two weeks earlier welcoming him home from basic training.

The sign, with red and blue letters on a white background, and an American flag below it read: "Welcome Home, Josiah."

He didn't know at the time where the Army was sending him or how long he'd be gone. But Miller smiled and said to himself, "I will be seeing that again when I come back." As he entered the house, his parents, Wes and Terry, were standing in the living room. His mother immediately gave him a hug and asked if he had eaten. Wes Miller, himself a member of the 1-148th back in the early 1970s, sat at the kitchen table and talked with his eldest son.

Miller's unit could be stationed at Fort Knox for up to a year. The deployment disrupted his life and will delay his college education, but Miller is comfortable with it.

"I'm 19 and I have my whole life ahead of me. So what if I put it on hold for a year?" he asked. "It may be good for me. I'm going to have active-duty experience, something a lot of guardsmen (including Miller's father) haven't had."

When he reported to his unit, many of his fellow soldiers were afraid because they didn't know where they were being sent, what their mission would be or how long they'd be gone. Some thought they'd be shipped overseas to fight, and the thought of perhaps not seeing their families again was unbearable.

However, Miller remained calm and did not fret. Instead, he said he turned to a higher power.

"It's not in my hands, it's all in God's hands," he said. "He's the one who's kept me from worrying and He gives me peace of mind."

Miller reads the Bible each evening before he goes to sleep at about 7 p.m. He read the entire New Testament while in basic training, and he plans to read the Old Testament during this deployment. He's currently on the book of Job.

"I want to be able to someday say I read the entire Bible," he said.

At any time there's a possibility that someone could drive to Wilson Gate and shoot him and his fellow guard members, or a bomb could detonate in his face as he's searching a car. But Miller has no qualms about his job because of his strong faith in God.

"God is taking care of me," he said. "Besides, I've had quite a bit of training, and I'm not alone out there. I know the other soldiers are looking out for me."
Members of the 220th Engineering Installation Squadron from Zanesville have been called to active duty in support of Operation Enduring Freedom. Twelve individuals have been deployed since October 2001 and are assigned to United States Central Air Force (USCENTAF).

Under the leadership of Lt. Col. Jeff Lewis, a seven-member management team has joined forces with another management team from the 218th EIS from St. Louis, Mo. Together these teams are managing the EI workforce deployed at several locations in Southwest Asia. This combined team is working from a classified location on the East Coast.

All 19 EI units in the National Guard have various skilled teams activated. The first priority is the engineering of permanent base communication infrastructure to several joint military base locations in Southwest Asia. Five members of the 220th engineering section were deployed to an overseas location; they since have returned and are currently working on project packages in-country.

The management team works two shifts, the first starting at midnight. This schedule allows program managers to communicate to the deployed teams to provide guidance and help resolve problems. As the engineering is completed and materials become available, installation teams will be sent to complete mission taskings.

SMSGT TERRI VANCE / 220TH EIS

Airport security increases during holiday season

An additional 35 Ohio Army National Guard soldiers were activated to support security missions in Ohio airports for 60 days, through the holiday season. These soldiers were from units located throughout Ohio, falling under the command of 1-73rd Troop Command, Columbus, or 2-107th Cavalry Squadron, headquartered in Kettering.

SPC Dante McElroy, 324th MP Company, scrutinizes the belongings of airline travelers at Port Columbus.

NOBLE EAGLE / ENDURING FREEDOM BUCKEYE GUARD 9
52nd WMD team gets call to assist

The 52nd Weapons of Mass Destruction, Civil Support Team (CST), stationed at Rickenbacker Airport, Columbus, responded to a request Oct. 26 by the Ohio Department of Health to assist with field testing and sample collections from mail trucks in Lima.

The 18 Ohio guardmembers spent the day conducting six field environmental sample tests from three semi trucks, which all tested negative for anthrax. The team wrapped and sealed 12 samples which were delivered to authorities for transportation to an Ohio Department of Health testing facility. The team was not activated, but performed the mission upon request, as part of its normal duties. **AGOH-PUBLIC AFFAIRS**

School raises flag to honor 323rd

The family support group for the 323rd Military Police Company, Toledo, coordinated an American flag-raising ceremony at local Arlington Elementary School to honor the members the unit activated for duty supporting Operation Noble Eagle. Nearly 600 people attended the Oct. 23 ceremony. The flag will be retired and presented to the unit upon the return of the troops.

Becky Orwig, family support group president, and Sharon Elieff, group vice president, were instrumental in ensuring the ceremony came to life. They both have spouses who are members of the unit.

When children at the elementary school realized that members of the 323rd were activated, they wrote letters and made cards for the troops. Days later, Elieff, an academic booster, visited the school to ensure each classroom had a flag. While there, she noticed the new playground was missing a flagpole and flag. She approached the school principal and the city mayor who confirmed it was on order. It was delivered two days later.

Elieff said the unit's support group has blossomed since Sept. 11. Individuals from many local organizations and churches have stepped forward to offer assistance in a variety of capacities.

“We are trying to be proactive. We call to check up on each other and to identify needs that may exist,” Elieff said. “Then we find a way to make sure those needs are satisfied. This will enable our soldiers to do their jobs without worrying about things we can take care of. We hope that our efforts help morale and allow the soldiers to feel better about what they are doing.” **MSGT MIKE MYERS / 178TH FIGHTER WING**

Bill maintains pay, health care for activated state employees

Gov. Bob Taft approved legislation Nov. 20 that ensures state employees who are on active military duty suffer no loss of pay or health care benefits from their state jobs.

“Our guardsmen and reservists should not suffer an undue financial hardship when our nation calls on them to serve,” Taft said. “This bill ensures Ohio will be there for our men and women in the military, while they are there for our state and nation.”

Previous law granted state employees one month (22 days) per calendar year of state-paid military leave. After one month the employee is paid either the lesser of two options—the difference of the employee’s gross monthly wage and the sum of the uniformed pay and allowance received or $500, maximum. Previous law also did not continue health benefits to the employee after the one-month period.

Ohio Senate Bill 164 removes the $500 limit and pays the full differential between state and military pay and allowances, and provides for the continuation of health care benefits. Payments are retroactive to Oct. 1, covering guardmembers called to serve in Operation Enduring Freedom and Noble Eagle. **GOVERNOR’S COMMUNICATIONS OFFICE**

Attorney general offers free legal help

Members of the Reserve and National Guard called to duty because of the terrorist attacks are eligible for free legal help from the state, Attorney General Betty Montgomery announced recently.

Staff lawyers with Montgomery and selected lawyers statewide are providing free legal assistance through the PATRIOT program.

“Every day since Sept. 11, men and women are being called up to active duty to fight for our freedom,” she said. "We must do all in our power to protect their families back home."

The Sept. 11 assistance is meant to help National Guard members and reservists get easier access to protections offered by the federal Soldiers and Sailors Civil Relief Act. The act typically helps military personnel make up the difference between civilian and military pay, avoid evictions and delay civil proceedings until they return from service.

The Ohio lawyers also will help military personnel with estate planning and living wills. For more information, check out www.ag.state.oh.us on the Internet or call (866) GI-HELPER. **ASSOCIATED PRESS**
Unusual wedding, inspirational love

There were no flowing white gowns. No flowers lined the aisle. Battle dress uniforms replaced tuxedos. There was not even enough time to introduce the two brides who shared the same ceremony to one another.

But none of this mattered to the young couples who pledged Oct. 5 to love their new spouses "till death do us part."

Both grooms were Ohio Army National Guard soldiers awaiting orders for deployment in support of Operation Noble Eagle. Sgt. Thomas Patterson and Spc. David Lapp serve in the 838th Military Police Company, Austintown.

Jennifer (Backus) Lapp said after the events of Sept. 11, she had a feeling her then-fiancé would have to leave. "He was in Columbus, working the night shift (at his civilian job), when the attack on America happened. My call to tell him (in the morning) woke him up," she said. "I knew then he would leave."

When the MPs went on stand-by in late September before being called to duty, the couple said they knew their time together before he left was limited. The Lapp-Backus wedding, planned for Sept. 28, 2002, in the elaborate gardens of the historic Stan Hewitt Hall in Akron was instead performed on a Friday afternoon in front of the Austintown Armory.

The other bride, Heather Maggie, said as long as they were getting married, she did not care where the ceremony took place. Her future groom concurred. "As long as Heather is there, nothing else matters," Patterson said. "She was my cheerleader in school. She still cheers me on today."

The Pattersons were planning to marry after he graduated from Youngstown State University. When the call came, their plans changed quickly.

Patterson said he asked for enough time to run to the courthouse and arrange all of the necessary paperwork for a civil ceremony. When he came back to the armory, a simple ceremony had already been planned by his fellow MPs, with a chaplain and reception in tow.

The guests were limited at these military nuptials. Few family members and civilian friends were able to attend. However, two platoons of soldiers created an aisle and cheered for the new couples. The MPs formed an arch of batons, rather than sabers, which welcomed the brides to their new extended Guard family. SPC MICHELLE MORGAN / HQ STARC (-)

Students send Christmas greetings

The spirit of the holidays began whispering through the northeastern Ohio town of Windham in October, then roared into December when the entire school district gathered at a pep rally to present Christmas cards created by students for deployed members of the Ohio National Guard.

Jennifer Folger, mother of two Windham students and a parent volunteer at Katherine Thomas Elementary, had been sending Christmas cards to deployed soldiers for years. This holiday season, because so many Ohio soldiers were deployed in defense of America, she wanted to do more.

"They give so much. I would not want to be away from my family at all, especially not during the holidays," Folger said. "I wanted them to know we appreciate their sacrifice."

With that in mind, Folger asked the schools if one or two of the classes would be willing to create cards to send to the soldiers, maybe as an English or art assignment. Instead of the few volunteers Folger hoped for, every teacher in the entire school district wanted to be involved.

"The response was overwhelming," said Carol Kropinak, Windham High School principal. "The entire staff wanted to participate. The students were just as excited."

Folger came into contact with Maj. Daniel B. Jones Sr., officer-in-charge of the Ohio Army National Guard’s northern recruiting region, who made it his mission to find out how to get the cards to deployed soldiers.

The cards were officially presented to Jones—for later delivery to 1-148th Infantry Battalion soldiers—Dec. 7 at Windham High School, where every student in the entire district had gathered.

"We appreciate their help and protection. This is our way to say thank you," said Windham 10th-grader Dante Warren. SPC MICHELLE MORGAN / HQ STARC (-)

Kitchen creations show gratitude

Piggybacking off the old adage that an "Army travels on its stomach," two patriotic women provided Ohio Guard members with several sweet and tasty "thank yous" during the holiday season for the work many are doing to defend the nation.

Dana Landrum, wife of Maj. Gary Landrum of the 179th Airlift Wing, and Kathy Sims aided with donations from many other supporters, baked dozens upon dozens of cookies the last few months of 2001 and delivered them to Guard air bases and armories statewide. The gesture was to show community support for the Guard and the service of its members who have been deployed due to the events of Sept. 11.

"These cookies were baked as a steadfast reminder to guard members that we will keep the home fires burning," Dana said. "Thank you from our hearts and know that we all keep you in our prayers."

By the end of 2001, it was estimated that Landrum and Sims had baked and distributed more than 30,000 cookies. AGOH-PUBLIC AFFAIRS

VIPs visit troops during holidays

"I’m very supportive of what our troops are doing, and want to do anything we can to show our support," Hobson said.

He presented the Ohio airmen with care packages from their families, and apple dumplings and candy from Young’s Jersey Dairy, a Springfield area business. AGOH-PUBLIC AFFAIRS
Smith chosen for task force position

A 30-year veteran of the Ohio National Guard was appointed Nov. 28 to coordinate the work of a state task force set up after Sept. 11 to prepare for any terrorism threats in Ohio. Col. Homer Smith will develop strategies for the Ohio Security Task Force and help it coordinate with local law enforcement the response to any emergencies.

The task force consists of the directors of the departments of agriculture, criminal justice, administrative services, health, emergency management and transportation, as well as the attorney general, adjutant general and the heads of Ohio's Environmental Protection Agency, the State Highway Patrol and the Public Utilities Commission. Smith, who is winding down a military career that began in 1971, is "on loan" and still employed by the Guard, but now reports to Lt. Gov. Maureen O'Connor who is also Ohio Department of Public Safety director and leader of the task force. GOVERNOR'S COMMUNICATIONS OFFICE

Guardmember part of patriotic CD

In the aftermath of Sept. 11, a wave of patriotism has swept across America. Amid a flurry of red, white and blue, countless numbers of flags, t-shirts, bumper stickers and other items bear the symbols of a renewed pride in the nation. Similarly, radio transmissions beam news of the war and patriotic music into Americans' homes and vehicles almost non-stop.

And with the new war comes a new song on America's soundtrack, one conceived in the former Ohio canal town of Coshocton.

"Uncle Sam's Song," a spoken-word anthem scribed and performed by local songwriter Joe Henderson, initially received airplay only on area radio station WTNS (99.3 FM), but was released to wider outlets nationwide in mid-January.

The first thing that might catch one's eye about the compact disc is the cover art depicting three individuals—a firefighter, soldier and law enforcement officer—standing proudly in front of a waving American flag. The first thing that might catch one's eye about the compact disc is the cover art depicting three individuals—a firefighter, soldier and law enforcement officer—standing proudly in front of a waving American flag.

As a traditional soldier, Skelton is the family readiness officer for the Ohio National Guard. She said her work is often "done behind the scenes" and is part of the Guard's continuing effort to support its soldiers and their families. However, this is the first time that her military career has brought her into the limelight in such a prominent manner. "I'm very down to earth. This is a rare claim to fame for me. This may be my 15 minutes," Skelton quipped.

Area residents Bob and Sandy Fintzler, who helped with financial backing for the project, knew of Skelton's military service and asked her to participate.

"I'm flattered to be a part of it. I'm proud to be representing my hometown in the war effort," Skelton said. "I didn't know at the time when I was asked to do the cover that it would be a national effort. It's a good recording and it makes me misty-eyed when I hear it."

To purchase a copy of "Uncle Sam's Song" by Joe Henderson, send $7 to "Sam CD," P.O. Box 126, Coshocton, Ohio 43812, or call (740) 622-3133 to charge by credit card. SGT BOB BARKO JR / HQ STARC (-)

National soup company joins charitable effort during holidays

Across the board, much of Corporate America has stepped up and used its companies' specialties to make the holidays a little brighter for U.S. troops overseas and at home, including donations of food and beverages, books, electronics equipment and telephone services.

Through the initiation and coordination of one Ohio Guardmember, Campbell's also joined the effort the season.

First Battalion, 147th Armor Command Sgt. Maj. Lowell Shank knew that his civilian employer—Campbell's, which makes such products as Chunky Soup and V-8 juice drinks—normally made food contributions to various charitable organizations each holiday season. Shank said having enough food for Guard families to eat was a prime concern since many deployed guardmembers were receiving smaller incomes based on their military pay, compared to paychecks from civilian employment.

He pitched the idea of putting the Ohio Guard on Campbell's contribution list to his superiors, who bought into the idea entirely.

"Of the more than 1,400 guardmembers deployed, roughly 30 percent don't have the income they had before," Shank said. "We've got a lot of (guardmembers') families who are in need. Taking care of (guardmembers) is a No. 1 priority. With them deployed, it falls on us at home to help take care of their families."

So Campbell's agreed to donate several pallets of Pepperidge Farm cookies and crackers, soup and juice products. Another guardmember and Campbell's employee—Lt. Col. Ken Laidk of the 180th Fighter Wing Logistics Squadron, Toledo—arranged for transportation of the food and beverages to the state Family Readiness Office at Ohio Guard Headquarters at Beightler Armory, Columbus. From there, the items were distributed proportionately to subordinate family support groups for all deployed units—Army and Air—for further distribution down to the families of deployed guardmembers.

"I think it's great that companies like Campbell's are seeking us out to donate to the families of deployed troops," said Chief Warrant Officer 2 Carmen Davis, state family readiness coordinator. "True support comes from the folks who seek us out without having to ask."

"I thank (Campbell's) on behalf of all the military families this food has reached."

Overall the Family Readiness Office received 1,280 cases, or 12 pallets, of food products worth about $40,000, according to Shank.

"The usual donation for charity at the company is 200 cases every other year. (Campbell's) was definitely playing the patriotism role," Shank said. STEVE TOTH / AOGH-PUBLIC AFFAIRS
By Command Sgt. Maj. Robert Jennings
237th Personnel Services Battalion

To anyone other than a military strategist, deploying U.S. soldiers around the world for peacekeeping, warfighting or other contingency operations must seem like a logistical nightmare. So in today’s fast-paced, quick-strike Army, what does it take to track these globe-trotting troops?

Ohio Army National Guard soldiers recently experienced first-hand the ins-and-outs of processing and deploying soldiers in the 21st century. During their two-week annual training at Fort Dix, N.J., members of the 237th Personnel Services Battalion (PSB), headquartered in Columbus, helped mobilize troops for Task Force Eagle, which is led by the 29th Infantry Division.

The Virginia-based National Guard division is in command of multinational forces in the Balkans for one year. As part of the deployment process, 77 soldiers from the Buckeye State worked with the Fort Dix Military Personnel Directorate’s (MPD) mobilization personnel and honed their skills in soldier processing tasks, which included reviewing and updating individual personnel and medical records.

A peek into the future also awaited the Ohio Guard personnel specialists as they were given the opportunity to input soldier readiness data into the Army’s new MOBLAS (Mobilization Level Application Software) at the Fort Dix Soldier Readiness Processing Site. Soldiers of the 237th Personnel Services Battalion helped prepare Virginia’s 29th Infantry Division for deployment to Bosnia.

SGT Juan Andrade III enters a soldier’s personal data into the Army’s new MOBLAS (Mobilization Level Application Software) at the Fort Dix Soldier Readiness Processing Site. Soldiers of the 237th Personnel Services Battalion helped prepare Virginia’s 29th Infantry Division for deployment to Bosnia.

"American-based camps in the Balkans are patrolled by security 24-7," Sturdivant said. "Soldiers going into areas considered hazardous will use these cards in those regions."

To add to the realism and importance of their mission, deploying soldiers were greeted by rows of concertina wire as they entered the Soldier Readiness Processing (SRP) building. The wire simulated the increased security levels soldiers will experience once they reach foreign soil.

In order to familiarize themselves with the latest soldier processing software, members of the 237th PSB first trained using mock records. "We want our support soldiers in a walk-run stage by the time we begin processing the nearly 300 soldiers from the 29th Infantry Division who are mobilizing to Bosnia," said Warrant Officer Rick Cosgray, a long-time personnel expert with the 237th PSB. "We’re trying to get familiar with the computer program so our soldiers can maneuver through the software to get these deploying troops through the process more quickly."

Added Sturdivant: "The benefit to the 237th learning this software is they can just come here and jump in and lend a hand and be supportive," she said. "My hope is that these soldiers leave here with a sense of gratification because of the things they have learned from the MPD family."

"This is the 237th’s first AT as a unit. The training at the SRP sight is an opportunity for us to perform a real-world mission," said 2nd Lt. Tiffany Boyd, the battalion’s training officer. "Our expectations are that the personnel soldiers will be trained or retrained on the new system that will help future soldiers deploy and will also get us ready for wartime or peacekeeping situations."

EDITOR’S NOTE: The 237th performed its annual training from July 28 to Aug. 11 at Fort Dix. The training proved fortuitous as personnel teams from the unit were used in the presidential call-up of Ohio National Guard units in support of Operations Noble Eagle and Enduring Freedom.
Battle in the Desert

Soldiers from the 1-148th Infantry Battalion acted as opposing forces (OPFOR) at NTC during annual training in August.

Story and photos by Sgt. J.R. Lewis
HQ STARC (-)

Just a couple months before members of the Ohio National Guard were activated to support the battle against terrorists from the Middle East, some ONG soldiers played the part of the enemy to prepare active-duty soldiers for the eventuality of desert combat that since has become reality.

Soldiers from the Ohio Army National Guard’s 1-148th Infantry Battalion journeyed to the National Training Center at Fort Irwin, Calif., from Aug. 12-31 to act as opposing forces (OPFOR) in a large-scale, brigade-level training operation against the 1st Armored Calvary Division out of Fort Hood, Texas.

The soldiers were broken down into three teams of an integrated motor-rifle regiment to supplement the 11th Armored Combat Regiment (Blackhorse), which is stationed at Fort Irwin.

Participating in the 25th year of OPFOR exercises at the NTC, the soldiers from the 1-148th went into the exercise intent on giving the 11th ACR ready and reliable support, said Maj. Rick Curry, 1-148th executive officer and commander of the task force that traveled to NTC.

“We’re not a training aid. We’re providing the 1st Cav with the ability to exercise their units in a simulated combat system and simulated battle,” Curry said. “The leadership of the 11th ACR has said they have never seen a unit come as well-prepared as we are.

“Any time we can impress our active-duty counterparts, the better off we are.”

The 1-148th soldiers were broken down into three task forces—Angel, Rampage and Destroyer—with elements of each team taking part in three defensive and three offensive operations based on scenarios created by different mission matrixes.

Each team specialized in different aspects of combat. Task Force Angel specialized in air assault. Rampage in mechanized assault and Destroyer in truck-mounted infantry operations.

Operations orders for the various missions weren’t given to the individual team commanders until the morning of the missions, which forced the command elements to use a great deal of fragmentary orders to get the word out.

This challenge, coupled with the heat of the NTC—located in the Mojave Desert with temperatures that sometimes exceed 120 degrees—and the “fog of war,” provided a taste of the complexities soldiers face on the battlefield.

“Our success at the NTC is a testimony not only to the physical toughness of our soldiers, but the great leadership in the battalion at all levels,” said Capt. Roderick Frederick, Task Force Rampage’s commander.

The most important element in keeping the
1-148th soldiers were able to train on the Dragon anti-tank weapon during simulated battlefield operations.

operations running smoothly was the permanent OPFOR, Frederick said.

"You can't find anything like this anywhere else," Frederick said. "They make sure that you're ready to step in and run with the game plan right off the bat."

Unit leadership also played a crucial role in the OPFOR game plan. Company commanders, first sergeants and NCOs were forced to take an active, assertive role in providing safety and coordination in the operations, said Rampage 1st Sgt. David Adams.

"This is a very harsh environment out here. You have to throw away the FM (Army Field Manual) on how to fight. Unorthodox methods, set into motion by creative and skilled leaders, are what it takes to win in the NTC," Adams said. "There are no limitations in the desert."

The attitude of "anything goes" in the desert was in stark contrast to the fighting the 1-148th soldiers were accustomed to in the wooded hills of Camp Grayling. Being able to see and be seen from great distances across the seemingly endless expanse of desert forced a switch in the game plan of the soldiers engaged in simulated combat.

"In a wooded environment you might not be able to see 20 or 30 feet. Out here, you can see 20 to 30 miles," said Sgt. 1st Class Dominic Fredo, Angel's first sergeant. "But with the right leadership and adapting skills this is just business as usual for us, only in a different environment."

Adapting to the rigors of combat meant some hands-on leadership roles for younger NCOs. When squad leaders were "killed" in exercises, these future first sergeants and sergeants major were forced to pick up the ball and run.

"Our leadership style constantly emphasizes what we call 'training down,' which means soldiers are always ready to move up and take over if a leader is lost," Fredo said. "Today I saw a platoon sergeant go down and a young squad leader step in and lead the platoon successfully."

The realism of the mock battle was made more acute by the use of MILES (Multiple Integrated Laser Engagement System) gear. The soldiers were outfitted with laser-reacting MILES gear that allowed the OPFOR and BLUEFOR (friendly forces) to simulate the effect of combat casualties on the platoons.

Hits on the MILES gear were tracked, along with all battlefield operations, by Fort Irwin cadre, who were then able to compute various aspects of mission success.

Despite the fact that a "dead" soldier could be revived to participate in the next mission, the 1-148th soldiers used the MILES gear for a very serious lesson in the rigors and hazards of combat. "I worked myself into the mindset where I wasn't even thinking about the MILES gear," said Spc. Jeff DaCosta, a Rampage infantryman who was able to cross-train on the Dragon anti-tank weapon before and during the exercise.

"This is my job. I'm supposed to survive to keep fighting," he said. "Why would I not want to make it to the objective?"

DaCosta added that while the MILES gear provided a touch of realism, the system is still flawed. While searching on a tank with his Dragon, he noticed that the vehicle didn't emit a flash when the cannon fired. Soldiers in the 1-148th were "killed" by what seemed like a phantom tank.

"It was in a hidden position and we couldn't fire on it," DaCosta said. "These were the few drawbacks that we had to make do with, but we still performed well."

While the Guard is used to working at a lower level, usually platoon and sometimes company, the grand scope of this operation seemed to have a resounding effect on the soldiers in terms of retention, according to Curry. "I've heard guys saying that if this is what we're going to do, then they're going to stay in (the Guard)," he said.

Such high-speed training has led to retention levels that place the 1-148th at the heralded position of number one infantry battalion in the National Guard by readiness standards, Curry said.

And having a successful mission in a new and exciting environment only can improve matters.

"If I was to give the task force a report card grade on this mission, it would absolutely be an 'A,'" Curry said. "We accomplished the missions set up for us by the command and saw a great bunch of leaders doing a great job."
Engineers test their versatility to aid U.S. Border Patrol in San Diego County

Soldiers from the 512th Engineer Battalion brought together panel bridge expertise and dirt-hauling experience to aid the U.S. Border Patrol during an annual training this summer in southern California.

Performing rotations from June through August out of a home base at Camp Morena in eastern San Diego County, the soldiers from the 191st Engineer Company (Dump Truck), Columbus, and 1193rd Engineer Company (Panel Bridge), Cincinnati, battled the heat and hostile environment to repair a fence line along the U.S.-Mexico border and fill in an old, unused road in support of the Border Patrol’s drug interdiction program.

Both missions were a complete success, according to Capt. Douglas Brunot, commander of the 191st, which closed out the operations in mid-August.

“Our goals were mission-oriented, but we were able to accomplish quite a bit and still give the soldiers a wide variety of experience,” Brunot said.

For the dump truck soldiers, the mission—in theory—was simple: haul 700 cubic yards of select fill dirt (and 150,000 gallons of water for compacting) from a pick-up site known as B&B Ranch to a slope reclamation site 10 miles away known as the “Campo Site.”

The haul from B&B Ranch to the Campo Site was a test to the heavy truck drivers from the 191st, said Chief Warrant Officer 2 Kevin Stewart, maintenance officer.

“They’re facing large mountains, steep roads that cut sharply, large boulders in the road and the heat is always a factor,” Stewart said.

Concentrating on safety while accom-
plishing the mission, the drivers were able to haul the required amount of road filling material, despite the lack of air-conditioning in the oven-like truck cabs and the treacherous road conditions.

While the drivers concentrated on safe driving, the 12 soldiers responsible for maintenance made sure the drivers had equipment to drive safely.

But coming into the mission, the role of the maintenance section was in question, Brunot said.

"Before we came down here, the maintenance soldiers asked me what they would have to do. The perception was that the permanent staff from Camp Morena would be taking care of the maintenance aspect," Brunot said.

This notion was quickly dispelled as the soldiers were immediately faced with the challenge of keeping the 5-ton dump trucks, D-7 dozers, graders and other mission-essential equipment on the road and in the field.

The challenge was made more difficult by the fact that the mission required the use of 5-ton dump trucks despite the fact that the soldiers were used to working with the 20-ton variety.

Sgt. 1st Class Roger McDonald of the maintenance section said his soldiers' attitudes were as important as their mechanic skills in working under the uncomfortable conditions.

"We drew about 13 trucks and managed to keep 10 or 11 up every day," McDonald said. "These guys were really gung-ho about that.

“We took care of minor problems in the field and put a Band-Aid on the major problems to get the equipment back to the motor pool at Camp Morena for repairs.”

Brunot said the efforts of the maintenance section were the difference between mission accomplishment and a stalled game plan.

"The maintenance folks really pulled together and kept the trucks running for us down here," Brunot said. "They made it a lot easier for the rest of the soldiers to do their jobs.”

Going above-and-beyond was a theme present among not only the drivers and maintenance soldiers, but also among the 512th soldiers (and supplemental soldiers from the 191st) who were assigned the difficult challenge of repairing the fence line along the border.

Utilizing a boom lift, fork lift, welding units and cutting torches, the fence line soldiers filled in about 216 feet of uncompleted fence with 400-pound steel panels.

Led by construction supervisor Sgt. 1st Class Renee Strahm, the soldiers, many of whom normally perform administrative, communication and supply tasks, were hastily cross-trained to be welders and construction engineers.

“For these soldiers who don’t have a construction MOS (military occupational specialty), the work was challenging, but the mission was given and they stepped up to the plate,” Strahm said.

The difficulties faced by the makeshift fence construction crew were sufficient enough to challenge even construction experts.

The gap in the fence line was at the crest of a steep hill, and the heavy steel panels had to be cut precisely and custom-fit using cutting torches.

Safety was another crucial factor. Not only were the soldiers forced to work in the two-foot buffer known as the “no-man’s land” on the Mexican side of the border, but the arid climate made brush fires an imminent threat at all times.

To extinguish the threat of a brush fire, the soldiers were provided with a dedicated on-site water truck, and a medic was always on-hand in case of a construction-related accident or heat casualty.

“Everything was done safely, and we were able to weld in 40 panels,” Strahm said. “We all watched each other’s backs...not only backs, but fingers, heads and toes also.”

Brunot said that while the road to completing the mission was long and difficult, the experience for the soldiers was a benefit that made the journey worthwhile.

“In Ohio, getting a mission like this would be virtually impossible,” Brunot said. “It’s unusual for engineers to be able to participate in a project of this size and scope.”
few hands went up reluctantly when the loadmaster asked if this C-130 Hercules flight would be the first of its kind for anyone on board. The C-130 happens to be the four-engine, turbo-prop transport that has been operated by the 179th Airlift Wing since 1976. Senior Airman Daniel Karbula was among those to take their first flight on the big ‘Herc.’

This was all part of the excitement as the 179th Airlift Wing, Mansfield, deployed 38 of its members Aug. 11-25 to Cold Lake Air Base, Canada, in support of 4 Wing, Royal Canadian Air Force.

The primary task for the 179th contingent—comprised mostly of civil engineering troops—was to assist in a major renovation of the Sergeants and Warrants Dining Facility, one of the original buildings on base. The wing also sent six food services personnel and six firefighters to augment the base full-time staff for the two-week trip.

Cold Lake, located approximately 400 miles east of the Rocky Mountains and halfway up the province of Alberta, is the largest and most active base in the Canadian Forces. Built in the early 1950s, the base is the home of 4 Wing, which is comprised of three flying squadrons, all operating the McDonnell Douglas CF-18 Hornet (24 Canadian CF-18s took part in Desert Shield/Desert Storm operations and logged about 5,700 hours in theater).

While weather prevented completion of the siding installation, the 179th engineers were able to install 100 new windows and added a veneer of four-inch Styrofoam insulation to the exterior walls of the 5,400-square-foot facility.

Second Lt. Craig Devore, deployment officer-in-charge, said he would be thrilled to come back to Cold Lake with another crew to do more work for 4 Wing, if asked.

“The folks here have been wonderful hosts and have done a great job keeping us moving,” Devore said. “Anything we needed was provided in a timely fashion, and the Canadians we have met here have been very friendly. They have been great people to work for.”

The Ohio Army Guard made history when it was the first National Guard unit to use the EADSIM system, as soldiers from the 2-174th Air Defense Artillery Battalion (AVENGER), McConnelsville, participated in a unique exercise run by RTI staff, and contractors from Teledyne Brown and Cubic Applications, Inc., maintainers of the Janus simulator.

“One of the things that put a limitation on us (with Janus) is that batteries can fight the near-term battle, but the battalions haven’t been able to fight the future battle, until now,” said Lt. Col. Mike Bish, 2-174th commander.

EADSIM models fixed- and rotary-wing aircraft, tactical ballistic missiles, cruise missiles, infrared and radar sensors, communications devices and fire support in a dynamic environment that includes the effects of terrain and attrition on the outcome of the battle, Keller said.

While the computer simulation is run inside the confines of the RTI basement, outside, battalion staff members in tactical trailers map movements and record data from the subordinate batteries via various modes of communication.

The end result of all computer simulations is that a commander will have a much better feel for how effectively his or her staff is communicating, what it is doing well and areas that need improvement.

“Janus and EADSIM simulators are merely the stimulus for communication among the battle staff,” said Master Sgt. Bob Marsh, systems NCO for the RTI’s simulation team. “How the staff communicates is the important part.”

While the Janus and EADSIM simulations ran simultaneously during the exercise, they were not actually working together. The simulations currently use different operating systems and cannot actually communicate and work in concert during a simulation, contractors said.

“What we’re trying to do is get to the steps where the systems work together. We’re not there yet,” Keller said. “This exercise was the first step in getting those systems to merge.”

However, as future technologies are developed, the two systems—or some of the many others on the market—may become compatible with one another as contractors work more closely together in order to meet the ever diversifying training needs and requirements of the National Guard Bureau and the Army Simulation, Training and Instrumentation Command (STRICOM).

Whatever the technology, the bottom line for the RTI staff is results, according to Col. James Dapore, the RTI’s simulation team director.

“We can ensure that, through the technology of these types of systems, we accomplish our
mission—to train (Army Guard) battle staffs for the state,” he said.

For more information on Janus and EADSIM, or how to utilize computer simulations to augment unit training, call the RTI at (614) 336-6446, or e-mail 145rti@oh.ngb.army.mil.

CLOCKWISE, FROM TOP: (1) MAJ Larry Heisler of the Ohio Guard’s simulation team guides SPC Marty Erne through an exercise using the Janus system; (2) Teledyne Brown’s Sam Hawkins inputs air defense battle scenarios over the midwestern United States using EADSIM software; (3) Receiving battery status reports, PFC Christina Cich consolidates data on a dry-erase board inside a battalion tactical vehicle; (4) Robert Christoph of Cubic Applications assists SGT Kat Miller during a maintenance recovery exercise on Janus.
Seniors Teaching And Reaching Students program empowers older adults to be tutors, mentors in local elementary schools

Story by Jim Villella
Ohio Department of Aging

What are three happily retired U.S. Armed Forces veterans doing inside Mansfield’s Ranchwood Elementary School on a day picture-perfect for golf or fishing?

Making a difference, that’s what.

A sonic and visual kaleidoscope of young children with laughing voices and boundless energy dominates the school building as the students move to their classes. Once inside, classes under way, the halls fall silent except for the muted voices of STARS volunteers. At desks at opposite ends of a long hall, Gary G. Bond and Joseph Schivinski each guide an attentive student in reading or math exercises. In the empty lunch room George Hauer does the same. They correct, encourage, prompt and tease a parade of youngsters through their lessons, repeating the process throughout the morning.

These Mansfield residents are members of an elite group of older Ohioans who get up close and personal with students to help them succeed in school and in life. Along with 22 other local residents, they are volunteers on the Ohio Department of Aging’s OhioReads/STARS team. STARS—Seniors Teaching And Reaching Students—is a unique intergenerational initiative, empowering older adults (ages 55 and older) to be tutors and mentors in elementary schools in their communities.

The three are also U.S. military veterans. Bond served on an aircraft carrier with the Navy on active duty during the latter part of the Korean War; Hauer spent nine years during two tours of duty in the Navy as well; and Schivinski spent two years in the active Army as a combat infantryman, rounding out his military service with four years in the Ohio National Guard.

A poster at a library in the town of Lexington drew Hauer’s attention to STARS, and a meeting with Ranchwood Elementary’s STARS Coordinator closed the deal. “STARS sounded good. It’s well-organized and Julie Robinson is a very positive and persuasive person, so I signed on,” he said.

Robinson personally asked Schivinski to be a STARS volunteer at Ranchwood. A retired police officer, Schivinski was already active in the Mansfield schools with the DARE (Drug Abuse Resistance Education) program. The former guardmember agreed and has been with the mentoring program since its inception.

All three veterans and their fellow volunteers spend about 20 hours a week at Ranchwood. STARS is targeted to a specific school’s needs. Volunteers spend time with individual children as needed and directed by the school’s full-time teachers. They act as substitute classroom monitors, help children with learning difficulties and tutor reading, math or computer skills.

“At Ranchwood, we are wherever we’re needed, to do whatever needs to be done to help the kids,” Bond said.

Ranchwood principal Bob Gibson declared the STARS program at Ranchwood an unqualified success not only for its students and the STARS team volunteers, but also for its positive impact on Ranchwood’s full-time teachers’ workloads. “It is gratifying to see STARS volunteers dealing one-on-one with pupils who need a little help. The volunteers here really care and you can see it in their eyes and in those of the students.”

Each of Ohio’s 550 STARS volunteers gives time to programs tailored to meet the needs of the more than 47 elementary schools involved. STARS operates in conjunction with Gov. Bob Taft’s OhioReads program.

Veterans and other retired persons interested in participating in an Ohio STARS program in their area may call toll free (877) 632-7827 or send an e-mail to kthompson@age.state.oh.us.
Seventy-year-old Forrest Inboden of Corning cuts 10 yards a week with a self-propelled, walk-behind lawn mower, but still thought it would be a good idea to get a health check-up.

Since the Ohio Army National Guard offered free medical screenings to the residents of Perry County last August, Inboden thought the time was right to get that annual physical.

"This is the first time I have done this, and it suited me very well," he said.

In its eighth year, GuardCare is nothing new to the trained medics of Detachment 6, HQ STARC (Medical). The event is designed to provide free health services to medically underserved communities in Ohio.

The Ohio Department of Health and the local county health department help coordinate the event which is staffed by Guard soldiers. During the last few years, GuardCare services have been offered to an identified county on two separate weekends, so the largest number of people can take advantage of the health care available.

Some of the services available included free immunizations, physicals, heart function screenings (EKGs), complete blood counts (CBCs), PAP smears, cervical examinations, hearing examinations, prostate specific antigen tests, blood sugar and cholesterol screenings, dental examinations, vision testing and glaucoma testing.

After months of planning, soldiers deployed to the Corning Civic Center to set up the first GuardCare event Aug. 11-12. According to Corning Mayor Jo Frasure, the 2000 Census reported 593 people resided in Corning, most of whom are retired.

Reaching the older population that lives on a fixed income is one of the main objectives of GuardCare. "Some people my age might be scared to do something like this because they might find something wrong with themselves," Inboden said. "I had no complaints about what they (OHARNG medics) did."

A community may be considered "underserved" if residents have far to travel for routine medical services. In Corning, the nearest doctor's office is about 15 miles away, and the closest hospital is more than 30. Other criteria include local residents with little or no health insurance, or those who simply don't make enough money to pay for a visit to the doctor.

Tracey Headley of Junction City brought three of her six children to Corning and the other three to the second GuardCare site, conducted Aug. 25-26 at the Perry County Fairgrounds in New Lexington. Headley has no health insurance and received free physicals for all six of her kids.

"This is a thorough program with easy access where I can have anything I need done for my kids," said Headley, whose children were impressed by the military uniforms worn by the medical personnel. "My seven-year-old thinks this is the best thing he has ever seen."

According to Capt. William Coleman, officer-in-charge of GuardCare 2001, Perry County residents were able to pick and choose from the health care services available. "If someone just wants an immunization, they can just get that," Coleman said. "If someone wants a full gamut (all the medical stations), they can get that too."

Each medical station took about an hour to get through, and each were staffed by a full range of military rank—from private to colonel. Since its inception, GuardCare has continued to serve communities in need, increasing from 440 patients in 1994 to 737 in 2001.
During the annual Red Ribbon celebration in October, U.S. Rep. Rob Portman (left) receives the one-millionth ribbon distributed by the Ohio National Guard from Maj Gen John H. Smith, state adjutant general.

Smith, ONG distribute one-millionth Red Ribbon

The Ohio National Guard’s leadership understands the importance of making smart choices, including the choice not to use illegal drugs.

For this reason, the Ohio National Guard and the Ohio National Guard Counterdrug Task Force have been coordinating Red Ribbon efforts throughout the state for more than 10 years.

Ohio National Guard members have dedicated much time and effort to many communities throughout the state of Ohio. All that time and hard work has culminated through the years to become an outstanding statewide Red Ribbon Kickoff and Celebration.

Last Oct. 22 marked the start of Red Ribbon Week in Ohio and across the nation as well. As part of the kickoff celebration in Ohio, Ohio Parents for a Drug Free Youth, Citizens Against Substance Abuse in Cincinnati and the Ohio Alcohol and Drug Policy Alliance, teamed up to organize celebrations at several different locations throughout the state.

The three locations chosen for the 2001 kickoff were Hilliard Heritage Middle School in Columbus, Lunken Airport in Cincinnati and the University of Rio Grande in Southeast Ohio.

More than 2,000 students were at the three locations as well as some special guests, including First Lady of Ohio Hope Taft, Ohio Parents for a Drug Free Youth Director Patricia Harmon, Drug Enforcement Administration Special Agent Rich Issacson and Luceille Fleming, director of the Ohio Department of Alcohol and Drug Addiction Services.

The guests were flown to each of the three locations in a UH-60 “Black Hawk” helicopter. At Lunken Airport, U.S. Rep. Rob Portman joined the others to share his anti-drug message.

Maj. Gen. John H. Smith, state adjutant general, presented a plaque containing the one-millionth Red Ribbon in the history of the program to Portman, a strong advocate of ONG efforts to educate the youth of Ohio regarding the issues of illegal drug usage. He also is chairman of the House Anti-drug/Anti-terrorism Committee.

The Counterdrug Task Force’s goal for 2002 is to double the number of ribbons distributed throughout the state, as well as the number of schools visited. Anyone interested in helping with the 2002 Red Ribbon Kickoff and Celebration should contact Spc. Matthew Toomey at (614) 336-6432 or matthew.toomey@oh.ngb.army.mil.

National Guard Bowling Tournament set for April

All members of the Ohio Army and Air National Guard are invited to participate in the annual National Guard Bowling Tournament, set for April 20-21 in Cincinnati.

The tournament’s host this year is Detachment 1, Headquarters Company, 216th Engineer Battalion, Felicity.

For more information, contact Staff Sgt. Frank Burns at (513) 553-2226 or walter.whited@oh.ngb.army.mil; Staff Sgt. Terry Geetys at (513) 753-5542 or mrjtf@aol.com; or Pam Hayslip at pamhayslip@fuse.net.

Spring ‘March’ needs foot soldiers

The “Just Say No March and Rally” is a community drug-free celebration that has occurred in Columbus every year since 1986. The march and rally is a visible sign to the more than 4,000 Ohio students who attend every year that making healthy drug-free choices are important.

The Ohio National Guard has supported this event for the past five years. Volunteer guardmembers are needed at the event to help show support to the future leaders of Ohio.

This year the event will take place May 10, beginning at the Columbus Convention Center’s Battelle Auditorium, 400 N. High St., Columbus. The march will take place following the program events.

People interested in supporting the event should contact 1st Lt. Phil McGonagill, Drug Demand Reduction Administrator, at (614) 336-6590 or phil.mcgonagill@oh.ngb.army.mil.

ONG COUNTERDRUG TASK FORCE

Retirees hold monthly luncheon in Columbus area

All retired Ohio National Guardmembers are encouraged to attend a monthly luncheon at 11:30 a.m. on the first Monday of each month, at the Bogeys Inn, 6013 Glick Road, Dublin, Ohio.

Attendees may order from the menu. Meetings are casual gatherings, without agendas, guest speakers or rank formalities. All retirees are welcome to attend and share general camaraderie.

WARREN MYERS / ONGE RETIREE AFFAIRS

237th FSB boasts graduate from Air Assault School

A mobile training team from Fort Polk, La., traveled last July to Camp Atterbury, Ind., to conduct an Air Assault School, and the Ohio Army National Guard was represented as Staff Sgt. Tricia Zelenak, of Alpha Company, 237th Forward Support Battalion, Springfield, successfully completed the course.
Guardmembers excel during annual state Combat Match

The 2001 Ohio National Guard Combat Match was held last summer at Camp Perry by the Ohio Army Guard’s Small Arms Readiness Training Team.

It is a battle-focused competition that measures guardmembers’ skills and provides training in advanced marksmanship. Several infantry soldiers led the way in the various events.

♦ Rifle Team Match: Company C, 1-148th Infantry, first place; Detachment 1, 372nd Maintenance Company, second place; Company B, 1-148th Infantry, third place.

♦ Pistol Excellence in Competition: Schrantz, first place; Sgt. Larry Motes, HH C 1-148th Infantry, second place; Chief Warrant Officer 2 Dana Osborne, Detachment 1, 372nd Maintenance Company, third place.

♦ Sniper Team Match: Company D, 1-148th Infantry, first place.

The 2002 match takes place June 14-15 at Camp Perry. The competition is open to all Ohio Guardmembers.

For more information, contact Chief Warrant Officer 2 Mike Konves, state marksmanship coordinator, at (419) 454-2181 or mkonves@aol.com. SMALL ARMS READINESS TRAINING TEAM PUBLIC AFFAIRS.
180th Fighter Wing members Lt Col Lindsey Whitehead (left) and Maj Amy Whitehead both were 2002 Winter Olympic torch carriers. Three Ohio airmen among Olympic torchbearers

To be one of about 11,500 people selected from more than 210,000 applicants to take part in the torch relay for the Olympic Games is a special privilege.

Three Ohio Air National Guard members were among the fortunate percentage who recently took part in transporting the torch on its 65-day, 13,500-mile journey through 46 states and arriving Feb. 8 in Salt Lake City for the 2002 Winter Olympic Games.

Master Sgt. Jeffrey A. Sallee of the 178th Fighter Wing, Springfield, ran a leg Jan. 3 in Dayton, while Maj. Amy Whitehead and Lt. Col. Lindsey Whitehead, both of the 180th Fighter Wing, Toledo, ran a quarter-mile leg Jan. 7 through downtown Ann Arbor, Mich.

“I had so many emotions that day, proud to represent my country, excited that my dream to carry the torch was real,” said Sallee, who is assigned to the 178th Maintenance Squadron.

The Whiteheads were co-selected to be Olympic torchbearers through a nomination from Master Sgt. Kim Grimes, a fellow 180th member.

“I feel that because the Olympics are in the U.S. and I get to be a part of that, it’s even more of an honor to carry the torch...especially because we’ve spent 20 years in the military,” Maj. Whitehead said.

Sallee and the Whiteheads were three of just 67 Ohioans to carry the torch for these Olympics.

“The torches were amazing,” Mrs. Whitehead said. “They only weighed about three pounds each, but were very top heavy and got heavier as we ran by the people.”

A veteran of more than 20 years of military service, Sallee said carrying the torch was a “very humbling” experience.

“I’m representing my family, Xenia, Ohio, the 178th Fighter Wing, all the branches of the military service and America,” he said. “I must carry myself in a manner that will not bring discredit to the Olympics, the torch or everyone I’m representing, including my 1-year-old granddaughter, Haleigh J. Sallee.

“My inspiration comes from her. I want her to have pride and values growing up. My historical gift to her is my torch after the Olympic Games.”

Legislator recognizes soldier for community service

One soldier who took his battalion commander’s suggestion to become more involved in the community not only got a greater sense of self-worth, but was recently recognized for his work.

Capt. Max Brewer, of the 216th Engineer Battalion, headquartered in Hamilton, recently received an Ohio House of Representatives proclamation for his work helping to restore Hillcrest Veterans Cemetery Oct. 27 as part of “National Make-A-Difference Day.”

Located near Cincinnati, the cemetery contains the remains of hundreds of Spanish-American War, World War I, World War II and Korean War veterans, most of whom are minorities. After years of neglect, the cemetery was in a deteriorated condition. In the spirit of the day, local organizations and churches sponsored “Restore Hillcrest Cemetery Day.”

At the suggestion of Lt. Col. Joe Knott, 216th Battalion commander, Brewer, along with his sister and her daughter, drove down from Columbus and spent their Saturday conducting inventory of gravesites for federal recognition and funding for repair. They also located and identified unmarked graves where the headstones had been washed away.

“The event was a big success,” Knott said. “Capt. Brewer and his family demonstrated the positive and community-oriented vision the Guard represents.”

State Rep. Wayne Coates, who represents the Cincinnati area that includes Hillcrest Cemetery, presented Brewer with a proclamation in a December ceremony in Coates’ downtown Columbus office.

“You have to get involved. More people need to get involved in the community,” Brewer said. “I didn’t do it searching for recognition. It’s nice to be recognized, but I really do feel it’s important to go out and get involved.”

Trio’s fast actions save life of fellow Army Guardmember

The quick thinking and emergency response of three soldiers from Headquarters, State Area Command, Columbus, saved the life of a guardmember during a physical fitness test in July.

Master Sgt. Robert Oberdier, Capt. Martin Norris and Sgt. Nancy McMillan were recognized as heroes for coming to the aid of Master Sgt. Larry Hale, a fellow soldier who had a heart attack at the unit’s July drill. Nearly halfway through the 2.5-mile walk of his physical fitness test, Hale collapsed facedown on the running track.

“When we got to him we turned him over and saw his face was all scraped,” said Norris, a medic with a Columbus area fire department in his civilian occupation. “I could tell he was in bad shape.”

After finding only a weak pulse and observing Hale’s inability to breathe on his own, the three soldiers began chest compressions accompanied by breathing assistance.

Worthington Fire Department medics arrived on the scene less than five minutes after being called and took over the task of rescuing Hale, who was then transported to an area hospital, where he underwent a quadruple bypass operation.

Norris, a five-year emergency medical veteran, said he believes Hale was lucky to have sustained the heart attack in close proximity.
proximity to several soldiers who were trained in CPR and a well-prepared fire station staff.

Norris said given Hale’s lack of pre-arrest symptoms, that could have multiplied the danger more if he had been alone when the heart attack occurred.

“When I visited him in the hospital he told me he never felt any pain,” Norris said. “It could have been worse if it hadn’t happened where it did.”

Oberdier, Norris and McMillan each were awarded the Ohio Distinguished Service Medal at a ceremony last year.

After a successful recovery period at home, Hale is back at work in the State Quality Office. SGT J.R. LEWIS / HQ STAR C

Talmage among Ohio Vets Hall of Fame inductees

Lance A. Talmage, Sr. made a name for himself in the Army. In fact, he liked the Army so much he decided to serve in all of its components—the active duty, Reserve and National Guard.

But on Nov. 8, Gov. Bob Taft honored Talmage, not for his military service, but for his outstanding service to the community when he was inducted into the Ohio Veterans Hall of Fame Class of 2001.

The Ohio Veterans Hall of Fame was founded in 1992 to recognize Ohio citizens with military service who continued to make a difference in their communities and state after honorable discharge. Ohio boasts the first veterans hall of fame in the nation, and was joined by Arizona, in early 2001.

Talmage—a retired brigadier general and former commander of the Ohio Army Guard’s deactivated 112th Medical Brigade—is active in the medical profession in his hometown of Toledo and throughout the state. He serves as medical director of the Center for Women’s Health at the Toledo Hospital and is the past president of the Ohio State Medical Association. He is on the board for the Lucas County Domestic Violence Task Force and is a current delegate to the American Medical Association. SHANNON SCHERER / OHIO VETERANS HALL OF FAME

Enlistment spurs new branch on family military tree

Swearing in new airmen into the Ohio Air National Guard is not an uncommon event, but in the enlistment of Airman Brett Douglas Green it was a matter of carrying on a family tradition.

As with most enlistees, Green was flanked by family members as he recited the oath of service, but in his case he was also surrounded by nearly 200 years of service to the Ohio National Guard.

His father, Maj. Douglas Green, with 28 years in the Ohio Army and Air National Guard, swore his son into his current unit of assignment, the 179th Airlift Wing, Mansfield.

Brett’s mother, retired Sgt. 1st Class Crystal Birkhold, and her husband, Chief Warrant Officer 4 David Birkhold, a 34-year veteran with Headquarters, State Area Command, watched the ceremony with pride.

The patriarch of the military observers, and possibly the proudest of all in attendance, was Brett’s grandfather, retired Col. Robert Green, who probably could not have imagined when he started his 38 years with the Ohio National Guard in 1956 that it would be the beginning of three generations of dedicated service.

The branches on Brett’s family military tree reach to his aunts, Col. Deborah Ashenhusrt and Sgt. 1st Class Andrea Mahr, who serve in HQ STARC, with 23 years and 15 years respectively. His uncle, retired Col. James Ashenhusrt, served 18 of his 23 years in the military with the Ohio Army Guard, and his cousin, Staff Sgt. James Ashenhusrt, served for seven years in the Ohio Army Guard.

With this elaborate root system supporting Airman Green, his limb of the family tree should continue to grow. And with two younger brothers, Brett could be just the beginning of the third generation of service. ADJ. GEN. DEPT. PUBLIC AFFAIRS

Helicopter accident kills Guard pilot, father of five

Chief Warrant Officer 4 Bill Spence, 51, a pilot with Troop D, 2-107th Cavalry Squadron, North Canton, died in a helicopter accident Jan. 18.

The civilian medevac helicopter he was flying from a hospital in Cleveland to pick up a patient crashed, killing Spence, a flight nurse and injuring a medical attendant.

Spence, who joined the Ohio Army Guard in 1984, was a medical flight pilot for C.J. Systems Aviation Group.

He is survived by his wife, Kathleen, and five children. He will be sadly missed by all, including his Guard family. MAJ BARBARA HERRINGTON-CLEMENS / ADJ. GEN. DEPT. PUBLIC AFFAIRS
January military pay raise largest in two decades

Servicemembers saw an average increase of 6.9 percent in their January pay.

“It’s the largest pay increase in 20 years,” said Navy Capt. Chris Kopang, Defense Department director of compensation.

In general, officers saw their pay increase 5 percent, he said, and enlisted servicemembers got a 6 percent boost in their pay beginning Jan. 1. Several pay grades saw significantly larger increases.

“We have chosen to target the pay raise to certain pay grades that we feel needed an extra boost because of retention needs,” Kopang said. For instance, officers in grades O-3 and O-4 received 6 and 5.5 percent increases respectively.

Noncommissioned officers also received larger raises. Kopang said, with the highest increases—up to 10 percent—going to the highest enlisted grades. Enlisted members in grades E-5 and E-6 saw an average 7.5 percent increase, E-7s an average increase of 8.5 percent, and up to 10 percent for E-9s.

President Bush in February 2001 pledged an additional $1.4 billion to go toward pay raises for servicemembers. He signed the 2002 National Defense Authorization Act, which included the extra money, Dec. 28. Without this money, Kopang said, members would have gotten a 4.6 percent across-the-board increase at the New Year.

Reserve Forces SERVICE

Reserve Affairs provides help for those called up

So far, about 50,000 guardmembers and reservists have been called up to reinforce active-duty units participating in Operation Enduring Freedom. Some are freeing up active-duty servicemembers for overseas duty while others are being deployed to Iraq.

When Enduring Freedom started, reserve affairs officials composed a set of rules and guidelines giving units ideas and directives about the mobility process and their time on active duty.

The information is also available on the reserve affairs website at www.defenselink.mil/ra.

“We get a lot of questions from servicemembers and their families who are going through this transformative process,” said Craig W. Duehring, principal deputy assistant secretary of defense for reserve affairs. “To help them, we’ve created a family tool kit. This is also available on our website, where your’ll find answers for virtually every issue that could possibly come up.

“There are answers for everything from pay questions to the duration of the mobilization, to whom do I contact if I have an emergency while the member is gone. There’s also information about handling problems before the servicemember is called up.

Mobilization pay and allowances are handled exactly the same way as for active-duty members. For example, guardmembers and reservists called up can take up to 30 days’ advance pay to cover unexpected bills that might crop up before they have to leave. But, primarily, pay and allowance issues should be the same as those of active-duty members.

Duehring said members can pay back the 30-day advance in installments. AMERICAN FORCES PRESS SERVICE

Disney offers free admission for activated guardmembers, reservists

To honor American men and women fighting for freedom, the Walt Disney World Resort and the Disneyland Resort announced a program that allows active U.S. military personnel complimentary admission into Disney’s U.S. theme parks, as well as ticket discounts for family members and friends.

“Disney’s Armed Forces Salute,” which began Jan. 1, runs through April 30 and includes the Walt Disney World Resort in Florida and the Disneyland Resort in California. Active U.S. military personnel, with proper U.S. military identification, are eligible, including active members of the United States Coast Guard and activated members of the National Guard or Reserve.

For more information, or to make reservations, call (407) 939-7424. WALT DISNEY PARKS AND RESORTS

ONESP Application Deadlines

Fall term, July 1
Spring semester/Summer quarter, Nov. 1
Spring quarter, Feb. 1
Summer term, April 1

It is the sole responsibility of a student/guardmember to turn in a completed application to the Ohio National Guard Scholarship Program office, located at the Adjutant General’s Department, 2825 West Dublin Granville Road, Columbus, Ohio 43235-2785, by the deadlines listed above. This must be done prior to each term a student attends school.

For more information, call (614) 338-7032 or toll-free (888) 400-6484.
Guard soldiers help dispense rabies vaccine

Story by Spc. Michelle Morgan
HQSTARC(−)

Vaccinating raccoons against rabies is not a glamorous job, where soldiers are cheered and heralded at the completion of their mission. However, the threat posed by rabid animals is very real, as was proven when a 3-year-old from the 'Youngstown' area was bitten while riding his tricycle in his driveway in 1997.

"The infected raccoons are not the only danger," said Dr. Roger Krogwell, assistant state public health veterinarian with the Ohio Department of Health. "Other wildlife as well as domestic animals like cats and dogs may come in contact with a rabid animal which drastically increases the risk of human exposure.

"Not only does post-exposure treatment drive up medical expenses, it may be extremely painful," he said.

To decrease the risk of exposure, in 1997 the Ohio Department of Health initiated an oral rabies vaccination program that swept the eastern border of Ohio, from Lake Erie to West Virginia, covering Ashtabula, Trumbull, Mahoning, Jefferson, Columbiana and parts of Harrison, Belmont, Monroe and Carroll counties. Working with other state and federal agencies and the Ontario Ministry of Natural Resources, this year ODH expanded its coverage area to include parts of New York, Pennsylvania and West Virginia, to begin forming an immune barrier that will keep raccoons from spreading back into Ohio.

Not one verified case has been discovered since 1999 and, though their plan is working, ODH needed additional help to keep Ohio safe. The call was made to the Ohio National Guard. "We’ve had a problem with many of the volunteers who quit after the first flight. They get tired or air sick and just give up," said the Ohio Department of Health’s Bob Hale. "Working with the Guard is great because I can count on them to finish what they start.

“This year was even better because many of the volunteers from previous baitings returned, so they already knew what was expected.”

Until 2000, it never occurred to Ohio Guardsmen who had taken an oath to protect citizens from all threats—foreign or domestic—that this would include protecting them from raccoons. However, 12 soldiers from the 1-107th Armor Battalion answered the call to state active duty for help.

“It felt really great to do something for my state,” said Sgt. Edward Mains, of Headquarters and Headquarters Company, 1-107th Armor Battalion, Stow. "It’s not a fun job but it is necessary. I was a volunteer last year and will be again if they need me.”

After the performance of the Guard, Hale said he plans to fill all of his flights with soldiers, if possible.

The actual vaccination process is fairly simple. The vaccine is placed in a fishmeal bait that may be distributed by crews on the ground or in the air. Conveyor belts running from the cockpit to the tail of Canadian-piloted Twin Engine Otter Planes drop the baits through a small hole in the bottom of the plane.

The planes are small, cramped and smell like dead fish. To effectively distribute the baits, they can only fly about 500 feet above the ground. According to Hale, combined, these conditions can make even the most experienced flyers air sick.

In addition to all of the physical work and unpleasant conditions, this year the mission faced certain restrictions when the FAA grounded all flights on Sept. 11. Baiting teams were stranded, sometimes in other states, and had to work their way back to the Youngstown-Elser Metro Airport in North Lima. The bans on flying were lifted, only to be enforced again at later times.

“What should have taken eight days to complete took two weeks,” Hale said. "We lost a couple of soldiers because they were activated (for homeland defense), but we really appreciated all of the help from the Guard.”

Hale was not the only one to appreciate the hard work and efforts of the teams.

"It may not be the most prestigious or thankless job for soldiers, but my family is truly grateful," said Mahoning County resident Jochen Risden. "Until they began baiting, we had to worry about ourselves and our pets every time we even went near the woods. Now we can just enjoy ourselves.”

Todd Cramer / Adj. Gen. Dept. Photo Lab

SFC Ron Norton holds a sample of the fishmeal bait used to distribute oral rabies vaccine to Ohio’s racoon population.

SFC Frank Montini (left) and Norton stock a conveyor belt with vaccine-filled bait that will be dropped in-flight.
